

JURASSIC PARK

by

Michael Crichton

A Screenplay Based on the Novel

Revised First Draft
January 19, 1991

"JURASSIC PARK"

1. EXT. JUNGLE ROAD - DAY

Through the impenetrable jungle, a JEEP bounces over a rugged muddy road toward us. As it approaches, we hear people singing "Do Run Run" at the top of their lungs.

Inside, a typical American family: MIKE BOWMAN, a beefy Texan real estate salesman; his cheerleader-pretty wife ELLEN; and in the back seat their nine-year old daughter, TINA. They sing "Hey he caught my eye..." words that seem to mean something to the parents, and the kid has learned them, too.

The Jeep turns down a hill and we discover we're near the ocean: beyond, a breathtaking crescent-shaped beach and the sparkling blue Pacific.

MIKE

Who-aaa! Will you look at that!

TINA

'The beautiful beaches of Costa Rica are frequented by a variety of wildlife, including howler monkeys, squirrel monkeys, and three-toed sloths.' You think we'll see a three-toed sloth, Dad?

MIKE

Maybe so, honey.

TINA

I'm gonna look when we get there.

ELLEN

Tina, honey, don't read in the car, it's too bouncy.

TINA

Aw, Mom.

ELLEN

It'll make you throw up.

TINA

Jeez. It will not.

MIKE

Beach ahead! Coming up!

2. EXT. THE BEACH

The Jeep parked in the shade of palms. Ellen gets out the picnic basket. Tina scampers away, carrying her coloring book, along the two-mile arc of pristine white.

TINA

Yahoo! See you later!

ELLEN

Tina, don't forget sunblock! Tina!...

MIKE

Hey!

He tosses a sunblock stick; she catches it deftly, keeps going.

ELLEN

Where are you going?

TINA

(not stopping)

Find a sloth!

MIKE

(laughing)

Not too far!

ELLEN

(shaking her head)

Find a sloth. Our little naturalist.

MIKE

This is the right place for her. This whole area is a biological preserve.

ELLEN

Beautiful..(meaningful)... Nobody here....

MIKE

(slow, wicked grin)

That's true...

3. FAR DOWN THE BEACH

Under the mangrove trees, Tina throws herself down in the

sand, panting, pleased to be alone. She opens her book; thumbs through the sketches of different animals she has made. She hears her parents laughing, looks up.

WHAT SHE SEES. Her parents fifty yards away, shriek and laugh like kids, her father chasing her mother into the surf.

Tina picks up a leaf, looks at it; the young naturalist. A nearby rustling sound makes her look over. A green LIZARD pokes its head out of the foliage. Tina is delighted at the arrival of an animal. Smiling, she starts to draw it in her book.

THE LIZARD is very cute. It cocks its head, emerges from the foliage. About a foot tall, it stands on its hind legs. Its long tail sticks out, balancing it. Its fingers move tentatively.

Tina continues to draw. The lizard slowly comes forward toward her feet. Tina pauses, not daring to breathe. Finally, she resumes sketching.

The lizard's three-toed feet leave tracks in the sand. The lizard hops onto her sneaker, starts to move up her leg. The cute little clawed feet now pinch her flesh.

Tina frowns as it comes boldly to her knee. Then the lizard scrambles forward with startling swiftness, and bites her arm and cheek. She howls, flails her arms; smacks at the lizard with her coloring book.

4. BACK TO HER PARENTS

Mike holds Ellen in the surf, giggling and squirming:

ELLEN

Put me down! Put me down!

And finally they hear Tina scream. They stop, look at each other, start running down the beach.

5. TINA

Now rolling on the sand, shrieking hysterically. Mike arrives first, picks up his daughter, pulls the lizard off of her, grabbing it in his fist.

The lizard turns nasty, writhing and shrieking in Mike's

hands, trying to twist free, to bite him.

Mike swings his arm down, smashes the lizard into the beach, again and again, kicking up spits of sand. Repetitive hammer swings, moving progressively toward the rocks at the ocean's edge. The lizard is bashed on the rocks. Then Mike stands, stomps on the lizard repeatedly. We assume it is killed.

Tina sobs in her mother's arms as Mike comes back, takes her. As the girl lets go, she leaves a large streak of blood on her mother's cheek. Ellen picks up the book. A grim-faced Mike carries Tina back down the beach.

6. INT. MODERN HOSPITAL - SUNNY AFTERNOON

White-coated DOCTORS cluster, murmur in Spanish, move apart to reveal Tina, sleeping peacefully, oxygen mask on her face. Nearby, Mike and Ellen watch tensely.

The doctors inspect the bites on Tina's arm, look at the picture Tina drew. One of the doctors comes over to Mike. They speak in low voices, rapidly, with some urgency:

DOCTOR

There is nothing to worry about, Mr. Bowman. Your daughter will be fine. But the lizard which attacked her--- this is a picture she drew of it?

MIKE

Yeah, that's right.

DOCTOR

We do not know this lizard. An animal that stands on its hind feet, like this... You say you killed it?

MIKE

I think so. I'm not real sure... I was pretty upset...

DOCTOR

Yes of course. But we would like to go to the beach and find the body of the lizard... then send to an expert in the States for identification.

MIKE

When do you want to leave?

DOCTOR

I think, now. (sees Mike look away to his daughter) Your wife will stay with Tina. I think it is important we go now.

7. EXT. THE BEACH - AFTER SUNSET

Against fading purple light, a cluster of sea birds on the sand, tightly bunched, coo and peck at something unseen. In the background, men run forward, yelling, their flashlights dancing spots of light. The birds squawk and lift up into the sky. The men arrive, shine their flashlights down. Mike holds a fragment of flesh up into his light.

MIKE

(wrinkling nose)

This is it... What's left of it.

In crisscrossed lights, the men babble excitedly in Spanish at the discovery.

8. EXT. NEW YORK STREET - DAY

The honking jarring city. A van pulls curbside. A DELIVERY MAN carries a white plastic CYLINDER dangling customs tags. He enters: "Columbia Medical Center Laboratories."

9. INT. TROPICAL DISEASE LAB

DR. RICHARD STONE pulls on mask and gloves and shines a work light forward.

STONE

Let's see what we've got here.

The white cylinder is stenciled "INTERNATIONAL BIOLOGICAL CONTAINER." Stone opens latches, while a technician reads:

TECHNICIAN

Biological fragment from Costa Rica... a lizard bit a child... they want a check for communicable diseases... this is her picture of the lizard...

STONE

Okay...

The container opens with a hiss. Stone removes a baggie, shakes out what looks like a frozen green chicken leg, partly chewed.

TECHNICIAN

Oh, very nice. Somebody's dinner.

STONE

(turns fragment with
forceps)

Do an X-ray and take Polaroids, then let's thaw the fragment and see if we can get enough blood to do the antibody runs. We'll take it from there. Let me know if there's a problem.

Stone gets up to leave, looks at the picture of the lizard. ALICE, another technician, walks by with glassware in her hands.

ALICE

Oh, whose kid drew the dinosaur?

STONE

What?

ALICE

(nod to picture)

The dinosaur. Isn't that what it is? My kids draw them all the time.

STONE

This is a lizard, Alice. From Costa Rica.

ALICE

No, look at it. Big head, long neck, stands on its hind legs, thick tail. It's a dinosaur.

STONE

Alice. It's only about a foot tall.

ALICE

So? There were little dinosaurs too. Believe me, I have two boys, I'm an expert. The smallest dinosaurs were under a foot tall. Teenysaurus or something.

Alice looks at the fragment on the table.

ALICE

I'm serious... Has anybody checked it? The Museum of Natural History or... (shrug)... I don't know... You should check it... Who's the world's best dinosaur expert?

We go from the distinctive clawed toe of the specimen to

10. EXT. MONTANA EXCAVATION SITE - DAY

A CLAWED TOE partially excavated from rock. Identical to the claw just seen, until a human hand reaches in with a whiskbroom, and shows us this claw is actually as big as the hand. A small ruler is placed alongside it.

ALAN GRANT is bent over the claw. He wears jeans and faded T-shirt, all covered in pale dust; he's a no-nonsense field scientist—crusty and grumpy. He wipes dusty wire-frame glasses with a knuckle.

GRANT

Document this exposure before we go further, then take the claws out.

STUDENT

Okay, Alan.

GRANT

Don't rush it: that's a perfect specimen of velociraptor antirrhopus. A vicious predatory dinosaur. (smiling) Call me if you need help.

VOICE (O.S.)

Hey Alan!

Grant stands, moves among COLLEGE STUDENTS who dig with him in the desolate Montana badlands. In the foreground, kids move rocks in wheelbarrows past him. One student comes over with a notebook computer. THE SCREEN shows a yellow outline of eggs in a nest. Data flashes on as the edges of the image, very complicated...

STUDENT

We got tomography of the nest site on D-14 and we want to know if you're ready to go forward. (screen changes to show more

data) The p-val is under point one oh.

GRANT

I hate computers. Are you saying a nest is there, or not?

STUDENT

We're not sure. We need another study.

GRANT

No. Forget the computer. Start digging.

TEDDY, another student, covered in chalk dust, falls in step.

TEDDY

Alan, take a look at this.

It's a painting, showing predatory dinosaurs at the edge of a blue lake. An island offshore, where herbivores breed. Grant lowers the picture to see the same perspective, only now the island in the lake is a hill in the badlands. Where the kids are working.

TEDDY

What do you think?

GRANT

Not bad, except the lake should be milky green.

TEDDY

Milky green? There hasn't been a lake for 65 million years. How do you know what color it was?

GRANT

'Cause it was alkali. The albedo of suspended bicarbonates would've made it pale, milky green.... Just change it, will you Teddy?

TEDDY

How are the dinosaurs?

GRANT

The dinosaurs are good. Except some of them should be eating eggs. These small predators ate eggs.

Grant continues. They pass an egg site, where GIRLS

excavate a distinctive conical mound. Nine eggs stick up.

VOICE (O.S.)

Alan? Alan!

He looks down to their camp below. By the field trailer, an attractive woman waves to him: ELLIE SATTLER.

ELLIE

Alan!

Grant waves back, starts down the hill. The two kids stare.

STUDENT

Is she really a paleo-botanist?

STUDENT 2

(nodding)

Professor Sattler... (sighs)...

11. INT. FIELD TRAILER

Grant follows Ellie into the trailer, which is a field biochemistry laboratory, rows of dishes and equipment, but all of it dusty. Kids work as technicians.

ELLIE

There's a fax coming in from New York you might want to look at... a girl was bitten by a lizard... in Costa Rica...

GRANT

Costa Rica? A girl?

They stop before the fax machine, which is still going.

ELLIE

Here's the cover letter. This is the picture the girl drew of the animal that bit her....

Grant stares for a moment. Frowns.

GRANT

All kids draw pictures of dinosaurs, Ellie. She was bitten by some lizard.

ELLIE

That's what they thought, too. This is the X-ray of the lizard remains...

Grant stares. Focused now, silent.

GRANT

(to himself)

This acetabulum is definitely saurian. And the metatarsals look distinctly... (after beat, amazed) This just might be real....

ELLIE

(nodding)

I thought so, too. It's a long shot...

GRANT

Yeah. A very long shot. (tucks fax in back pocket of his jeans) It's probably just an aberrant lizard, but let's get the specimen, and originals of these X-rays, and then we'll see. Anything else?

ELLIE

Yes. I thought you'd want to know--- John Hammond is on his way over here.

GRANT

John Hammond? Here?

KID

(passing)

Who's John Hammond?

GRANT

He is a rich man--- a very rich man--- who has paid for our excavations here for the last five years. In fact...

He passes a picture of Grant from a big article in Time: "The Great Dinosaur Hunter." It's being used as a dart board.

GRANT

Hey, I thought you guys weren't going to do this anymore. Didn't we talk about this?

KID

(not looking back)

Wasn't me.

GRANT

Uh-huh. When is Hammond coming?

ELLIE

(worried)

Actually, he's not coming. His lawyer is coming.

GRANT

His lawyer? Why would he send his lawyer?
(beat) Is he going to cut our funding?

ELLIE

I don't know.... (hearing sound of
helicopter)... but there he is now.

12. BACK OUTSIDE

The helicopter circles noisily, and descends, flaps tent fabric, swirls dust around the site. As it lands, a SMOOTH MAN of 30, wearing an Armani suit, runs beneath the blades.

MAN

Dr. Grant? Dr. Sattler? Don Gennaro, of Cowan, Swain and Gennaro. I represent Mr. Hammond.

GRANT

Come over this way... Ah, don't step there, you're on the skeleton...

GENNARO

(clumsy)

Oh, sorry... Dr. Grant, I need to talk to you. (beat) Oh dear, I'm sorry...

GRANT

(wincing)

That's all right...

GENNARO

(deep breath)

Dr. Grant... I'm sure you don't want to hear what I'm going to say. I know you think your work here is important. But I hope you'll try and see it from Mr. Hammond's point of view... He has generously supported your research for many years... And he feels justified in his position. Are you following me?

GRANT

(waiting for the axe)

Yeah, only too well...

GENNARO

So please take this in the spirit that it is intended... Mr. Hammond is asking you and Dr. Sattler to come with him for the weekend to a resort he is about to open.

GRANT

To what?

GENNARO

I know it's inconvenient...

GRANT

(incredulous)

A resort?

ELLIE

(gracious)

It's not inconvenient at all...

GENNARO

It's an island off the coast of Costa Rica. It's quite nice, really.

GRANT

(frowning)

It's nice? A resort? (making it sound awful) Do I have to get dressed up?

GENNARO

No, no, it's very informal. But would you and Dr. Sattler like to go pack some things?

GRANT

You mean you want us to go now?

GENNARO

Yes. Right now. We've got to meet Mr. Hammond's private jet in half an hour.

GRANT

What's the rush?

13. INT. HAMMOND'S JET - DAY

A cabin in his personal DC9, flying through the clouds. Gennaro stands beside a seated JOHN HAMMOND; vigorous, 70's wearing a pinstripe suit. Gracious, flamboyant, persuasive, in constant motion, he has charm to burn.

HAMMOND

The rush? There's not rush at all, Alan. The truth is, I am very excited. Very excited. Let me tell you about this from the beginning. (dramatic pause) For the last five years, I have been working to build a fabulous, fabulous resort off the coast of Costa Rica.

GRANT

I didn't know anything about it.

HAMMOND

No one did. It has been kept an absolute secret. It's very special, very unusual, and I wanted it to be a surprise. I am delighted to say after five long years, my resort is now finished--- well, almost finished--- and I desperately wanted my friends to see it first. And I thought of you and Dr. Sattler, immediately.

GRANT

(dumbfounded)

You did?

ELLIE

What Alan means is, he's not the resort type. I can hardly get him to go out to a restaurant.

GRANT

I don't like to relax. Drives me crazy.

HAMMOND

Well, I think you'll like this resort, Dr. Grant.

GRANT

(unconvinced)

How long will we be there?

HAMMOND

Just a day or two. Though you'll probably want to stay longer. I'll show you where

we are going. If you'll come this way...
 (leads them forward) I've also brought my
 grandchildren. (lower voice) Their parents
 are getting a divorce, and I thought
 they'd like to get away, and have some fun
 with us.

14. ANOTHER COMPARTMENT IN THE JET

Like an architect's office: blueprints on the walls, a
 display case in the center, which we can't see because TWO
 KIDS have their backs turned to us.

HAMMOND

There they are. Tim... Lex...

TIM MURPHY, 11 and bespectacled. LEX MURPHY, a tomboy of 7,
 wears a baseball hat, her mitt slung over her shoulder.

HAMMOND

Say hello to---

TIM

No kidding! Grandpa said you might be
 coming... Wow! Alan Grant...

Hammond beams; he's delivered. Grant smiles, shakes hands.

GRANT

Hi, Tim...

TIM

I have your book. "Lost World of the
 Dinosaurs." It's practically my favorite
 book.

LEX

Daddy says that Tim has dinosaurs on the
 brain.

GRANT

(shaking her hand)

Well, I have the same problem.

LEX

Daddy says dinosaurs are really stupid. He
 says Tim should get out and play more
 sports and stop diddling with his
 computer.

GRANT

(amused)

I see.

TIM

Chill out, Lex.

ELLIE

(stepping in)

And what do you like, Lex?

LEX

Third base. I played it all year. But I'm switching to first. 'Cause, the last five games, I've been hitting .300...

ELLIE

Three hundred? That's pretty good.

LEX

Yeah, I stopped cocking my wrists. It made all the difference.

Lex calms down as she gets attention.

TIM

So... are you digging now?

GRANT

Yes, actually we just found a very good velociraptor skeleton.

HAMMOND

(privately amused)

Let me show you where we're headed.

LEX

You mean the zoo?

HAMMOND

It's not exactly a zoo, Lex. (leads them to the display case) It's more like a game preserve, a sort of park. It's an island one hundred miles off the coast of Costa Rica, called...

The display case shows the island, as a model.

15. EXT. HELICOPTER - APPROACHING THE ISLAND - DAY

HAMMOND

...Isla Nublar. Actually an extinct volcano, though there's still volcanic steam in places... as you can see, ocean currents make it permanently covered in mist.

Isolated in the ocean, shrouded in fog, the island has an otherworldly look.

HAMMOND

Twenty-four square miles, making it the largest privately owned animal preserve in North America...

PILOT

Starting our descent now. Hang on, folks. Landings can be a little rough.

The helicopter plunges into the mist.

16. INT. HELICOPTER

It bounces wildly in the thermals. Jagged rock walls close to us, and tree branches reaching out through the mist. Passengers look from one side to the other--- it's bad on all sides.

TOWER (ON RADIO)

Five hundred feet... four hundred...

Intermittent clouds block everything, and we see only the flashing flare of the helicopter's own lights. When the fog clears, the cliffs and trees are even closer.

TOWER (ON RADIO)

Two hundred feet... one hundred fifty feet...

LEX

(worried, edge of tears)

Grandpa? Are we going to crash?

HAMMOND

No, Lex, we're fine. Why, I remember when I first started coming to this island, five years ago, we used to have to land by ship, and that was rough. (big jolt) This is nothing. I bet you're not even scared.

LEX

No... Not me.

Lex looks at Ellie, smiles confidently. Ellie grips her knees, tries to smile back.

TOWER (ON RADIO)

One hundred feet...

HAMMOND

Almost there, Lex...

Below, in the fog, the lighted helipad with its huge glowing X. Inside the helicopter, a RAPID BEEPING SOUND, like a stall alarm, and then the helicopter settles, sound decreasing.

HAMMOND

(beaming)

Ah. Here we are. Safe and sound. Nothing to it, really...

17. EXT. HELIPAD OVERLOOK - MISTY DAY

As they start down the hill toward a big overlook, the helicopter almost immediately lifts off again, thundering. Then silence. The CRY of strange birds in the mist. We cannot help but feel stranded. The main vista is socked-in: a sign points out features in a valley we can't see.

HAMMOND

Oh, too bad... there's a wonderful view from here... Well, let's get you settled in at Park Headquarters.

As they climb into parked CONVERTIBLES, Grant hears a faint cry. Not a bird---unworldly. He snaps his head around: what was that? But the car engine starts, drowns it out. They drive off.

18. EXT. PARK HEADQUARTERS

Buildings set in a rugged landscape. Thought still under construction, it is clearly a fabulous, visionary resort.

19. EXT. VISITOR LODGE

Cars drive past a barred FENCE to a magnificent structure,

with pyramidal glass skylights.

20. INT. VISITOR LODGE - DAY

Grant and Ellie walk through their rooms, furnished in crisp safari/rattan style. Automatically a TV comes on:

TV VOICE

Hello, and welcome to the exciting new resort from Hammond Genetic Technologies. We hope you enjoy your stay with us....
(etc)

Grant tosses their bag on the bed, looks up at the skylight.

GRANT

Bars in the ceiling...

ELLIE

And bars in the fence. The windows are small, too. It's a little like prison.

TV VOICE

...surrounded by absolute luxury with tennis courts, swimming pools, putting green, fully equipped gym, Jacuzzi and sauna, as well as your choice of four different three-star restaurants.... (etc)

Grant presses the button, but you can't turn it off.

GRANT

This must be the future. You can't turn the TV off. Let's get out of here.

21. INT. VISITOR LODGE - GAME ROOM

IAN MALCOLM, all in black with buzz-cut hair, plays pool skillfully, with lots of carom shots.

MALCOLM

Ah, you finally arrived. You must be Alan Grant and Ellie Sattler. Ian Malcolm.

GRANT

(shaking hands)
That's a familiar name...

MALCOLM

I'm a chaotician. (deprecating smile)
That's what they call us. Mathematicians
who study chaos theory.

ELLIE

Did Hammond bring you here, too?

MALCOLM

Yes, I was surprised he did. I consulted
on this project years ago. I told him then
his island would be a disaster.

GRANT

A disaster?

MALCOLM

Oh yes. This island's a disaster. No
question about it. Chaos theory says so.

ELLIE

I don't really know what chaos theory is.

MALCOLM

It's not difficult to understand...
Umm... (hesitates, looks around)... Look
out the window.

Outside, Lex and Tim play catch by the artificial waterfall
that bubbles down to the swimming pool. Sky and clouds
beyond.

MALCOLM

When you look at the world, you see two
kinds of phenomena. One is the regular
movement of objects, like that ball...
Mathematics deals with regular movement
very well. We can predict the movement of
the planets, we can send spaceships to the
moon, all that. Right?

ELLIE

Right...

MALCOLM

But now chaos theory allows us to
understand waterfalls and clouds....

HAMMOND

(entering the room)

And what does a cloud have to do with my island?

MALCOLM

Nothing, but chaos theory says your island is uncontrollable.

HAMMOND

(not amused)

It's not...

MALCOLM

I promise, it is. Complex non-linear systems are sensitive to initial conditions and therefore unpredictable... You might as well ask where that petal in the waterfall will end up... it's absolutely unpredictable. And uncontrollable. And so is this island, Mr. Hammond. Uncontrollable.

HAMMOND

(amused)

Wrong again, Ian. I'll show you why. Are we all ready for the tour?

22. EXT/INT. VISITOR CENTER

They enter to recorded dinosaur roars. The interior is large, elegant and unfinished decorated with dinosaur skeletons, with scaffolding still around them. The theme: "WHEN DINOSAURS RULED THE EARTH." Grant looks around, curiosity piqued.

HAMMOND

Our visitor center isn't finished yet, but when it is, it will serve the educational functions of the park... The auditorium is this way... Our show is aimed at a young audience, but you'll get the general idea...

23. INT. AUDITORIUM

Padded seats, plush setting. ED REGIS, an enthusiastic guide, in phony safari garb, jumps onstage.

REGIS

Hi, I'm Ed Regis, I'll try my best to be your guide. You're our very first tour, you know. (back to canned speech) I'm glad you folks have decided to come here to Jurassic Park.

GRANT

(frowning at the name)

Jurassic Park?

REGIS

Most people want to know about the genetic techniques we've used to recreate actual, living examples of those mighty creatures from the past, the dinosaurs.

GRANT

(sits forward, startled)

What?

The room lights go down. Hammond smiles in the dark. Grant whispering intensely to Ellie and Malcolm. Regis continues:

REGIS

Actually, we've made these living dinosaurs with the help of genetic cloning. To explain that, I'm going to need my own clone--- Ed Regis.

Another Ed appears, projected on the screen behind him.

REGIS

Hi, Ed.

ONSCREEN ED

Hi, Ed.

REGIS

We've got to help these nice folks understand what we've done at Jurassic Park.

ONSCREEN ED

Okay, Ed... Let's see (peers at audience)... I don't know how much these people know about genetics... Hold out your finger.

REGIS

Why?

ONSCREEN ED

I need some of your genetic material.

REGIS

Now just a minute here, Ed...

ONSCREEN ED

Your genetic material is the same in every cell of your body. You have a hundred trillion cells. You won't miss a couple.

REGIS

I might.

ONSCREEN ED

Just hold out your finger, Ed.

Onscreen Ed appears to reach forward with a needle, and jab.

REGIS

Ow!

ONSCREEN ED

Don't be such a baby. I just took a drop of blood... (puts it under a microscope) Now let's look at your white cells. You see each one has a nucleus. And inside that nucleus... (image changes)... is the genetic material, called DNA. Do you know, one DNA molecule in one little cell is actually six feet long! But it contains all the information to make a complete animal. Like you. (image changes) But this molecule has an even more amazing property. It can reproduce itself... (image changes) And make another copy. And another cell. And if this new cell were grown into a full organism, we would get... Another Ed Regis! And another! And another!

Onscreen, a new clone. And another. Each new one speaks.

NEW EDS

Hi, I'm Ed.... Hi, I'm Ed... (etc)

ONSCREEN ED

Stop! That's enough.

REGIS

You're telling me, Ed.

ALL THE EDS

You're telling US!

In the audience, Malcolm groans, shakes his head.

REGIS

And I thought to reproduce myself, I had to do it the old-fashioned way.

ONSCREEN ED

Not any more, Ed. We'll do it for you, with just a drop of your blood. Of course, you probably don't want us to do that.

REGIS

No, I don't!

ONSCREEN ED

But it's pretty handy to recreate dinosaurs.

REGIS

Want to tell the folks how we did that?

ONSCREEN ED

Sure. It was easy. All we needed was a little dinosaur blood.

REGIS

Dinosaur blood! Dinosaurs have been extinct for sixty million years. Where can you get dinosaur blood?

ONSCREEN ED

Let's go back... to the Jurassic, to the great age of dinosaurs.

The screen widens to an animated panorama of the Jurassic, and illustrates the following:

ONSCREEN ED

Back then, these big animals attracted lots of ticks and mosquitos and flies... Which would bite the dinosaurs, and afterward some of them would go sit on a

tree branch... and get covered in sticky sap... which would trap the insect. And that sap would harden, after millions of years, into amber; the yellow resin used in jewelry. Often you find insects trapped in amber. In our laboratories... We can drill into the amber, and then into the insect's stomach... very carefully... we can sometimes get some blood... Which we analyze in our high-end computers... And once in a while, it turns out to be blood from a dinosaur. We clone the DNA in our laboratories... and grow it in our special hatcheries... (image shifts to animation) and out comes... a baby dinosaur! And he goes to live in Jurassic Park! (image changes) That's all there is to it!

Animated dinosaurs applaud. Sustain this dinosaur tableau.

GRANT

I'm sure that's not quite all there is to it.

MALCOLM

Shouldn't we have a more technical discussion? From the person who actually did it?

REGIS

(looking hurt)

If you insist, our chief geneticist, Dr. Wu can show you the actual labs... Didn't you like the show?

MALCOLM

Let's see Dr. Wu.

Everybody gets up to leave although the animals are still projected on the wall; the show is a freeze frame...

24. INT. ROTUNDA - LOOKING OUT AT LABS

THE EXTRACTION LAB, the first of several arranged like spokes of a wheel. HENRY WU, 35, cool and precise in white lab coat, proud of his astonishing accomplishment.

WU

Our work to obtain dinosaur DNA begins

here, with physical extraction from
amber...

Behind glass, a display of screens set up for visitors. In the BG, we see part of the lab itself, technicians moving, working. The screens show scanning microscope imagery, as Wu speaks rapidly, unabashedly technical:

WU

...using Levine-Loy antibody technique, a method sensitive to the presence of only fifty nanograms of protein material. If the insect thoracic cavity contains saurian DNA, we'll recover it here. Next...

A COMPUTER DISPLAY on the inner side of the rotunda, screens showing high-speed analysis of DNA code.

WU

Our three Cray XMP supercomputers analyze the code, and Hamachi-Hood automated sequencers from the nucleotides in the correct order. Needless to say, we could never do this work without computers...

THE FERTILIZATION LAB. Technicians carry trays among complex equipment. There is elaborate security, with barred sections, double-doors and security locks with keypads. One technician enters a walk-in freezer.

WU

We fertilize here, and then freeze the embryos until we need them. We keep 'em locked in the freezer.

MALCOLM

Looks like a bank vault.

WU

With reason. Each dinosaur embryo is worth two million dollars to another genetics company--- if they could get their hands on one. We have elaborate security. We want to keep our dinosaurs right here in Jurassic Park.

THE HATCHERY. Warm infrared light, rocking eggs on tables covered in mist.

WU

When it's time, we insert the DNA into plastic eggs and grow them here in the hatchery.

GRANT

How long does it take them to grow?

WU

Three months until they hatch. They attain adulthood two to four years after that, depending on species...

MALCOLM

And how many species do you have?

WU

I lose track. Fifteen, I believe. Ed?

REGIS

Yes, fifteen.

MALCOLM

(disbelief)

You lose track?

WU

(unperturbed)

Well, sometimes a species has to go back to the drawing boards, so to speak... And we correct their DNA.

GRANT

(frowning)

Back to the drawing boards?

REGIS

Perhaps you'll show them an actual dinosaur, Dr. Wu?

WU

Yes. (to group) That is, if you'd like to see one of our babies?

25. INT. THE NURSERY

A BABY DINOSAUR perches on the shoulder of a FEMALE TECHNICIAN. The dino is the size of a small monkey, striped like a tiger. It stands on hind legs, balanced by a straight tail. It cocks its head and peers at the visitors.

TIM

Jeez...

GRANT

Velociraptor...

WU

Velociraptor, yes. Just two weeks old.

Grant approaches to look; the raptor jumps to Lex's shoulder.

LEX

Hey!

WU

The babies can jump. So can the adults...

Lex holds the raptor, its face inches from her own. Dark eyes stare. A forked tongue flicks out. The raptor nuzzles her neck.

LEX

Will he hurt me?

WU

She. No. She's friendly.

GENNARO

(concerned)

Are you sure it's safe?

WU

Oh yes. The babies don't have teeth. They can't even break out of their eggs without the help of the nursery staff.

GRANT

What do they do in the wild?

WU

In the wild?

GRANT

Yes. When they breed in the wild.

WU

Oh, they never do. The animals in Jurassic Park can't breed.

GENNARO

Why not?

WU

Very simple. They're all female.

GRANT

(to Lex)

Do you mind?

He takes the baby and, with Ellie's help, efficiently inspects this animal: feeling the spine, checking the claws of fore and hind limb. Going over the raptor carefully.

MALCOLM

All female. Umm. I wonder, is that checked? Does anyone actually go out and lift up the dinosaurs' skirts to have a look? How does one determine the sex of a dinosaur, anyway?

WU

Sex organs vary with the species. On the animal you are holding, Dr. Grant, you'll see a very small cloacal opening ventrally... But to answer your question, Dr. Malcolm, we know all the animals are female because we grow them that way. Believe me, the dinosaurs can't breed.

The velociraptor rubs her head against Grant's neck. Grant hands her back to Lex.

GRANT

Fascinating.

WU

You are persuaded?

GRANT

Let's say you've got my attention. Are there any adult raptors?

WU

Oh yes, several. But they're not on the tour.

MALCOLM

Oh? Why is that...

REGIS

(shrug)

Haven't finished their habitat yet. So they're still in a holding pen. Now, I think it's time for us to go to the control room, so you can see how we keep track of the dinosaurs once they grow up.

26. INT. THE CONTROL ROOM

A cross between a carrier flight deck and a miniature mission control. In dim light, clusters of monitors, screens and vertical glowing displays. The center of the room is dominated by a large tabletop MODEL of the park. It is animated with inch-high dinosaurs.

TIM

Wow...

REGIS

This is the nerve center of Jurassic Park. It's designed to be operated by just one or two people. This is our chief engineer, John Arnold. John, you want to tell our visitors about the control mechanisms in the park?

JOHN ARNOLD, lean, chain-smoking man of 45 in shirtsleeves, turns to the group.

ARNOLD

Sure, Ed. As you can imagine, these are valuable animals. We take very good care of them. And we keep very careful track of them. Let me demonstrate. Name an animal.

GENNARO

(shrug)

Tyrannosaurus Rex.

GRANT

You have a Tyrannosaurus Rex here?

ARNOLD

Of course.

HAMMOND

Can't very well have a dinosaur park without a Tyrannosaurus Rex....

TIM

(awestruck)

A Tyrannosaurus... how big is he?

ARNOLD

(smiling)

Big.

Arnold presses buttons. The vertical glass map glows with a park outline. A blinking spot and code number appears by the lagoon. (It also lights up the animal on the model.)

ARNOLD

There's our T-Rex, over by the lagoon now. He tends to stay close to water.

TIM

You have a stegosaurus, too?

HAMMOND

Show him the stego, John.

ARNOLD

Heck, I'll show him every animal in the park.

The map lights up like a Christmas tree; dozens of spots of light, each with a code number.

ARNOLD

That's the current location of all two hundred thirty-eight dinosaurs. Accurate within five feet. Updated every thirty seconds.

The computer screen shows a tally: Total Animals 238.

MALCOLM

Very impressive. How's it done?

ARNOLD

We have motion sensors all over the park. And we get direct image recognition off video monitors. Even when we're not watching, the computer is: keeping track of where all the animals are.

GENNARO

So the animals roam freely?

ARNOLD

(shocked)

Absolutely not. As in a zoo, we contain our animals with a combination of concrete moats.... (orange bars light up board)... and electric fences. (bright red lines show) All our fences carry ten thousand volts. The animals know not to go near them.

MALCOLM

But you control everything from here?

ARNOLD

I can run the entire park from this computer, by myself. As a matter of fact, I need only 20 people to operate the whole island. (pauses, puffs cigarette) Hell of a Goddamned system. It was designed by Dennis Nedry, here. Our chief programmer.

DENNIS NEDRY, 35, is chubby, nerdy, messy, sits at a corner terminal, surrounded by candy bar wrappers and cokes.

MALCOLM

And what are you doing now?

NEDRY

Just cleaning up a few final bugs.

GENNARO

(worried)

What kind of bugs?

ARNOLD

In a big computer system, there are bound to be a few. And we want it to be perfect. (proudly) It's really a hell of a system.

REGIS

Now, I see the tour is starting, so unless you have other questions... let's go see dinosaurs!

27. EXT. VISITOR CENTER - AFTERNOON

A line of Toyota Land Cruisers comes from an underground garage. Each car pulls up, driverless and silent. BLACK MEN in safari uniforms open doors.

REGIS

This way, everybody, this way.

RECORDED VOICE

Two to four passengers to a car,
please.... Children under ten must be
accompanied by an adult... two to four
passengers to a car...

Grant, Ellie, Malcolm and Gennaro get in the first car. Tim
and Lex get in the second car with Regis.

INSIDE THE LAND CRUISERS - INTERCUTTING THEM

Entering, Tim whistles: mounted in the dashboard are two
computer screens, a CD-ROM, a portable walki-talkie, a
radio transmitter. Odd goggles in the map pocket. The car
starts off with an electric hum. Up ahead, the three
scientists and Gennaro talk and gesture, excited.

FEMALE RECORDED VOICE

In keeping with the non-polluting policies
of Jurassic Park, these lightweight
electric Land Cruisers have been specially
built for us by Toyota in Osaka. So now,
just sit back and enjoy the self-guided
tour.

A trumpet fanfare, and the interior screens flash "WELCOME
TO JURASSIC PARK." A sonorous voice intones:

MALE RECORDED VOICE

Welcome to Jurassic Park. You are now
entering the lost world of the prehistoric
past, a world of mighty creatures long
gone from the face of the earth, which you
are privileged to see for the first time.

Passengers look forward expectantly, as they pass a palm
grove.

RECORDED VOICE

The trees to your left and right are
called 'cycads', prehistoric predecessors
of palm trees. Cycads were a favorite food
of the dinosaurs. You also see
bennettitaleans, and ginkgoes. The
Jurassic world included more modern
plants, such as pine trees, and swamp
cypress.

ELLIE

(admiring)

Bennetitaleans... pretty good...

REGIS

We tried to be authentic...

The Land Cruisers pass fences and retaining walls, screened by greenery to give the illusion we're in real jungle.

RECORDED VOICE

We imagine the dinosaurs as huge vegetarians, eating their way through the swampy forests of the Jurassic and Cretaceous world, a hundred million years ago. But most dinosaurs were not as large as people think. The smallest dinosaurs were no bigger than a house cat, and the average dinosaur was the size of a pony. But for most people, the classic dinosaur is the sauropod, which we are going to see now. If you look to your left...

The cars stop. They all look to the left.

28. EXT. FIRST TOUR STOP

Between massive tree trunks, a spectacular view: the sun sinks toward a misty horizon. The lagoon ripples in the pink crescents.

A herd of duck-billed HADROSAURS grazes at the edge of the lagoon. They stand on their hind legs to get at high palm trees, then drop gracefully back down on all fours to chew. BABY HADROSAURS scamper around the adults, eating leaves that drop from the larger animals. A classic, tranquil dinosaur scene--- it could be taken from any children's book.

GRANT

(as it hits him)

My God...

REGIS

Ladies and Gentlemen, welcome to Jurassic Park.

Suddenly the trees in front of us move! A deep trumpeting sound, and TWO APATOSAURS rumble away from the side of the

road. The ground shakes as they walk--- their bellowing fills the air. Led by Grant, the passengers rise through the open top of the Land Cruiser, to look up at the dinosaurs far above.

RECORDED VOICE

The big animals you see are commonly called Brontosaurus but they are actually Apatosaurus. Each animal weighs more than thirty tons--- as much as a whole herd of elephants. They're the largest land animals in Earth's history. (etc)

From the apatosaurus' heads, leaves and branches fall down to Grant, who starts laughing in delight. He laughs hard.

AN APATOSAUR cranes down to peer at this curious laughing man. It never stops chewing. Its slow movements give it a solemn, judicious look. Grant laughs harder than ever. It's infectious, and the others are smiling, too.

The apatosaur pauses, stares... and belches. Grant goes into hysterics. Tears running down his cheeks.

LEX

Is he okay?

ELLIE

Yes. He just never expected to see this.

Grant coughs, gets himself under control. Barely.

GRANT

It's true. I never expected to see...
(wiping his eyes)... dinosaurs...

LEX

(staring up, deadpan)
Me neither. My teacher told me they were extinct.

GRANT

(trying to match her seriousness)
Mine, too. I was sure they were extinct.

And he can't help it, he's laughing again.

LEX

(thoughtful)

I'll tell you one thing, though: I
wouldn't want to clean up after them.

Grant is laughing harder than ever.

GENNARO

(in a reverie)

This place is going to make a fortune.

REGIS

We think so. (to Malcolm) Fantastic, isn't
it?

MALCOLM

I must say. Yes. Bloody fantastic.

As the dinosaurs move, huge legs block and reveal a green parking meter in the jungle: a motion sensor. It blinks at the passing animals.

Inside the car, the dashboard transmitter lights blink, the CD-ROM whirrs, and the screens show images of apatosaurs.

RECORDED VOICE

Now that we've had a look at these
remarkable herbivores, we'll go on to some
dinosaurs that are a little more
dangerous....

The Land Cruisers continue south through the park.

29. INT. CONTROL ROOM

Arnold at the console, Hammond watching at the monitors.

HAMMOND

Look at them. They love it! It's a dream
come true.

ARNOLD

It must be for Grant.

HAMMOND

Grant doesn't know what hit him.
Fantastic.... Those beautiful animals...
Oh, I've waited for this day...

ARNOLD

(to intercom)

Transmissions are overheating. Have maintenance check the electric clutches on vehicles BB4 and BB5 when they come back.

INTERCOM VOICE

Yes, Mr. Arnold.

HAMMOND

You seem a little tense, John.

Arnold pushes chair back, stubs out a cigarette. Clearly tense.

ARNOLD

This is the first time we've actually had visitors tour the park.

HAMMOND

There's no problem, is there?

ARNOLD

Of course not. But you know... (shrug)... first time the rollercoaster goes around the loops... it's little tense... (lights another cigarette)

HAMMOND

(frowning)

Those are my grandkids out there. Is there something you're not telling me?

ARNOLD

No, Mr. Hammond. I just want it to go right.

HAMMOND

And it is.

ARNOLD

I've got no problems as long as we keep the raptors out of the park. They're just too dangerous.

HAMMOND

I took your recommendation on that. The raptors are in a holding pen, aren't they?

ARNOLD

That's right. But I still think they should be destroyed.

HAMMOND

Oh, now John...

WU

(entering)

I do, too.

HAMMOND

Aren't you two overreacting?

WU

We're going to feed them in five minutes. You want to come down there, Mr. Hammond, and look at them again? Because to tell you the truth, they worry me.

Hammond hesitates. He doesn't want to miss the reaction of the people on the tour.

ARNOLD

Good idea. We've got ten minutes before they get to the jungle river, anyway....

30. INT. COVERED RAPTOR PEN - AFTERNOON

Hammond stands with Wu before a holding pit sunk in the ground. An electric winch lowers a carcass of meat. Looking down, they see movement in the foliage below, but no animals.

HAMMOND

How many raptors do we have now, Henry?

In the foliage, movement is frantic, as meat descends.

WU

Nine. Highly intelligent, as smart as chimps. They have dexterity with their hands. They're pack hunters. Quick. Smart. Vicious.

The carcass reaches the bottom. Still hidden, the raptors attack it. We have the impression of claws and rapacious tearing teeth. The carcass rises, now a dripping skeleton.

HAMMOND

Extraordinary.

WU

You see what I mean.

HAMMOND

(walking around pen)

Remarkable... so vicious... (shakes head)

In the pit, one clawed hand reaches up to grip the rising winch, hitch a ride... unnoticed. Wu follows Hammond around the rim.

WU

Mr. Hammond, if they ever get out again---

HAMMOND

But we've fixed it so they won't get out again, Henry... Isn't that true? They can't possibly get out, ever again.

Suddenly, A SNARLING RAPTOR hits the fence in a blaze of sparks. It's after Hammond, who spins away, his back to the bars, when a second raptor almost gets him! Snarling up beside his face, hissing in fury and exploding sparks. The raptor falls back. Smoke hangs in the air.

HAMMOND

(wiping forehead)

Perhaps you're right. Perhaps we should do it.

WU

We should've done it a long time ago.

HAMMOND

Well, we'll do it now, Henry. Right after this tour is finished.

31. BACK TO THE LAND CRUISERS

Driving along a ridge, above a fast-moving river.

RECORDED VOICE

To your left, you'll see our Mesozoic jungle river where you may catch a glimpse of a very dangerous carnivore. Keep your eyes peeled, everyone... And there it is... Dilophosaurus.

Two DILOPHOSAURS crouch by the river, drinking. Ten-foot bodies spotted like a leopard. The animals hoot like owls.

RECORDED VOICE

Dilophosaurus is one of the earliest carnivorous dinosaurs. Scientists thought their jaw muscles were too weak to kill, but now we know they are poisonous.

TIM

(grinning)

Hey. All right.

The distinctive hoot drifts across the afternoon air.

LEX

Are they really poison, Mr. Regis?

REGIS

Well, yes, Lex.

GENNARO

(frowning, amazed)

A poisonous dinosaur... (almost to self) I wonder if there's a liability issue...

REGIS

We keep well away from them on the tour.

RECORDED VOICE

Along with such living reptiles as Gila monsters and rattlesnakes, Dilophosaurus secretes a toxin in glands in its mouth. These amazing animals spit and blind their prey with venom. Unconsciousness follows within minutes. The dinosaur then finishes the victim off at its leisure, making Dilophosaurus a beautiful but deadly addition to Jurassic Park.

Lex looks worried.

32. BACK IN THE CONTROL ROOM

Hammond is frowning, mirroring Lex's expression.

HAMMOND

Change that recording about poison. It's too frightening for kids. This is a wonderful prehistoric world. I don't want

them to be scared.

ARNOLD

Dinosaurs are a little scary. In reality.

HAMMOND

I don't care about reality. We make the reality. I didn't spend four billion dollars and five years to make a park that scares little kids. Change the message.

33. BACK TO THE TOUR

In the distance, TWO TRICERATOPS stand motionless in the shade of a large tree. The horns above each eye curve into the air, looking almost like inverted elephant tusks.

RECORDED VOICE

Those Triceratops are nearsighted, and they'd charge our car if they were close enough to see it! But relax, folks, we're safe enough here. That fan-shaped crest behind their heads is made of solid bone. These animals weigh about seven tons each. Despite their appearance, they're actually docile, and like to be petted.

LEX

Why don't they move? (hanging out window)
Hey! Dinosaurs! Move!

REGIS

Don't bother the animals, Lex...

LEX

Hey! You! Hey! Stupid---

The distant dinosaurs stare dumbly but close to the car, humped over like a rock. AN ADULT TRICERATOPS rises to window height, and trumpets. Lex pulls her head back, chastened.

LEX

Jeez.

The Land Cruiser rumbles forward.

34. INT. CONTROL ROOM

Hearing voices of people in the cars. Hammond turns to the model.

HAMMOND

We better move the fences back. We can't have kids yelling at the animals and upsetting them. Even if she was adorable.

ARNOLD

Yeah, she's cute. What do you think, ten feet do it?

HAMMOND

Twenty feet.

ARNOLD

Okay. (beat) What'd you decide about the raptors?

HAMMOND

I think we better get rid of them.

ARNOLD

(clearly relieved)

Good... solves that problem.

HAMMOND

Well, what about our other problems? How's the computer coming, Dennis?

NEDRY

(at his corner terminal)

It's coming...

HAMMOND

This computer has been nothing but a headache from the beginning.

NEDRY

(looking fixedly at screen)

Well, maybe if you'd paid me my fees when they were due---

HAMMOND

Well, maybe if you had done it right in the first place, Dennis.

NEDRY

I did it right. You kept changing the

specs.

HAMMOND

We had to change the specs, Dennis. The computer was malfunctioning.

ARNOLD

Okay, let's not start this again... It's a large system and there are bound to be glitches. (distracting Hammond) You can see, your kids are by the Tyrannosaurus area now...

35. EXT. TYRANNOSAURUS PADDOCK

Another unearthly landscape, forests and fields and marsh. The light is fading. The Land Cruisers don't stop.

RECORDED VOICE

We'll stop to see Tyrannosaurus on our way back, but we are passing her habitat now, and you might catch a glimpse of her to your left. (everybody stares out to the left) There's a bit of luck involved, since Tyrannosaurus conceals herself during the day. It's because she has sensitive skin and sunburns easily. Keep looking...

WHAT THEY SEE. An unearthly landscape, faint ground fog... it's clear we are transported back millions of years. But no Rex.

RECORDED VOICE

Well, don't worry, we'll have another chance on our way back. Right now, we go on to a fascinating animal, the stegosaurus!

MALCOLM

What's that ship?

Through a gap in foliage, they see A DISTANT SHIP at a loading DOCK. A few lights.

REGIS

That's our supply ship. It comes every two weeks, bringing food for the animals. They eat so much, we can't possibly grow it on

the island.

The sky is darker, lower, and menacing. Growl of THUNDER.

REGIS

Looks like rain. Hope we can finish the tour before it starts coming down.

36. INT. CONTROL ROOM

One monitor shows the Land Cruisers on the tour. Another shows the supply boat. WHINE of RADIOPHONE. Move in to Nedry, typing.

RADIOPHONE

Ah, John, this is the Anne B. at the loading dock. Do you read me? Over.

ARNOLD

Reading you, Anne B. Go ahead, Freddy.

RADIOPHONE

Ah, John, looks like there's a storm coming. We've got falling barometric BPF and satellite forecasts plus eight hurricane force winds by midnight. I'd like to head back to the mainland earlier than scheduled.

Nedry's head snaps around. He stares, stunned.

ARNOLD

That sounds prudent, Freddy.

RADIOPHONE

I really think we should leave the island in the next hour.

Nedry mouths the words: the next hour. He is inexplicably upset; everyone else is matter-of-fact, droning.

HAMMOND

Safety is paramount. If you think you need to leave...

RADIOPHONE

I think it's best.

ARNOLD

Okay, Freddy, keep us informed.

Nedry bites his lips.

ARNOLD

(to Hammond)

I just hope our tour doesn't get drenched
when the storm hits...

Nedry gets up, bolts out of the room. Clear distress.

NEDRY

Excuse me.

HAMMOND

What's the problem?

ARNOLD

He's got a bad stomach. (as door slams)
He's sensitive. You shouldn't yell at him,
John.

HAMMOND

I didn't yell at him.

ARNOLD

You yelled at him.

HAMMOND

Well. Just a little.

37. INT. HALLWAY - OUTSIDE CONTROL ROOM

Nedry looks quickly around, then goes to the next room.

38. INT. THE NEXT ROOM

A narrow walk space on the other side of the control room,
so you can get to all the wiring. Big panels with wires.
Boxed, unused monitors. In the back, Nedry's little secret
place: a monitor shows supply boat. Nedry talks on a phone.

NEDRY

What are you talking about, leaving early?
You can't leave early.

RADIOPHONE

Gotta do it, Dennis. The storm.

NEDRY

But it's all planned! It's been planned
for months! Tomorrow at dawn.

RADIOPHONE

There's a storm, Dennis. What do you want from me?

NEDRY

But...

RADIOPHONE

You got something to get on this ship, you better have it here in the next hour.

NEDRY

But I can't! We're in the middle of a tour!

RADIOPHONE

Not my problem, Dennis. Get your stuff here in an hour, or... see you next time.

39. INT. CONTROL ROOM

As Nedry comes back in, gloomy, tense.

HAMMOND

(solicitous)

Are you feeling all right, Dennis?

NEDRY

(preoccupied)

Yeah...

Nedry goes to his terminal. Sits.

HAMMOND

I want to apologize for what I said before, Dennis. I was... not thinking.

NEDRY

Oh... okay... Yes, thank you.

HAMMOND

Is everything all right?

NEDRY

Yeah. Fine. (as if changing subject) Where are they on the tour now?

ARNOLD

They've just reached the stego paddock.

40. EXT. STEGO AREA

The Land Cruisers stopped before a stegosaurus, which stands quietly. A bulky body, vertical armor plates along its back. They walk toward the head.

TIM

Wow! A real stegosaurus!

LEX

Why isn't it moving?

REGIS

He's sick...

LEX

What's he sick with?

REGIS

We're not sure. He's being checked by our park ranger, Mr. Muldoon.

ALONGSIDE THE STEGO - LATER

The stegosaurus' mouth is propped open, and it wheezes as Muldoon scrubs the teeth with a brush like a hockey stick.

MULDOON

(glances back)

The illness? A complete mystery. These stegos are very fragile. It sounds strange, but they get severe tooth decay, then massive infection spreads to the oral cavity, and they die.

GENNARO

(shaking head)

Fatal tooth decay?

GRANT

Fossil skeletons don't show decay.

MULDOON

I know. But there's apparently been a change in bacteria in the last hundred million years... We've lost three animals so far.

Grant runs his hand over the scales, touching the skin. Tim touches tentatively, too. Grant examines at the toes: we notice the nails are cracked.

ELLIE

How about dietary change? Any strange plant they eat now?

MULDOON

Not that I know, but I'd be glad for your help, Dr. Sattler. Any thoughts you have. Easy, girl. Got a little spinach between your teeth...

Muldoon plunges his rubber gloved hand elbow-deep into her mouth, comes back out with a huge wad of green. Ellie pokes through the green mush. Lex looked horrified.

MULDOON

(takes a ball of heavy twine)

Now I'll just floss her. Easy...

ELLIE

This is interesting. Melia azaderach. China berry leaves. You have any culture swabs?

MULDOON

Help yourself. In my bag.

LEX

What's china berry?

ELLIE

(almost to herself)

It's a plant with toxic effects on bacteria. It could be changing the microecology of this animal's oral cavity.

LEX

(nodding, wordly)

Oh.

ELLIE

Look here... see this? That's the berry, and see it has a coating...

GENNARO

(to Muldoon)

Any chance this decay problem might be picked up by a visitor?

MULDOON

Not unless you French kiss her. No, people can't catch it. (stego burps, Muldoon rolls his eyes) Oh, girl...

LEX

(waving hand)

Phew...

REGIS

Perhaps it's time to resume our park tour. (checks watch) It'll be dark soon...

ELLIE

I'd like to stay here for a while... collect some samples...

GENNARO

I have a few more questions about this illness...

MULDOON

I'll bring them people back with me, Ed, if you want to go ahead.

Thunder rumbles.

REGIS

Fine, let's go. (to Muldoon) See you all back at the camp.

They start off. Almost imperceptibly, Ellie blows Grant a kiss. He winks back.

TIM

It's getting dark... Maybe we can't see the Rex on the way back.

REGIS

Oh don't worry about that. Have you ever used night vision goggles, Tim? They let you see in the dark.

TIM

Neat!

LEX

I want to use them, too. You get to do everything, Timmy!

The kids start to bicker, climb into the car.

IN THE LAND CRUISERS - LEAVING

Grant and Malcolm look back at the stego.

GRANT

(shaking his head)

Tooth decay... fatal...

MALCOLM

A small example of things going out of control. Small things.

GRANT

(looking back)

You suppose they're having trouble with other animals... and not telling us?

MALCOLM

Yes. I think there's a great deal they're not telling us. But we'll find it out sooner or later.

41. INT. CONTROL ROOM

Hammond stands before big windows that overlook the park.

HAMMOND

Land Cruisers are heading back. Wait a minute, they're stopping again.

ARNOLD

That's right. They make one more stop, by the Tyrannosaur. Rest stop.

HAMMOND

How long do they stop there?

ARNOLD

About ten minutes. Then they come straight on home. But they'll be there ten minutes for sure.

Nedry glances at his watch. Frowns. He starts to type at his console. Over his shoulder, we see: INITIATE SEQUENCE.

HAMMOND

Notify the dining room, make sure they're ready. My kids will be starving when they get back.

ARNOLD

The dining room's open. Most of the staff's eating there now. But I'll---

Arnold picks up the phone and hears hissing modem static.

ARNOLD

What's this? What's going on?

NEDRY

Jeez, hand that up. You'll screw up my data. I'm transmitting.

ARNOLD

You've taken all the phone lines? Even the internal ones?

NEDRY

I've taken the lines that communicate outside. But your internal lines still work.

Arnold punches console buttons.

ARNOLD

Looks like you've got 'em all.

NEDRY

Sorry about that, I'll clear them for you at the end of the next transmission, in about ten or fifteen minutes. I'm gonna get a Coke. (picks up his shoulder bag and heads for the door) Don't touch my console, okay?

He exits. At his console screen: numbers ticking backward...

42. EXT. REST AREA

A partially sunken rest area. Everybody gets out of the cars.

MALCOLM

(heartfelt)

Excellent idea...

As he and Grant walk away, the dashboard lights and video screens go out in the car. But nobody's there to see it.

43. INT. CONTROL ROOM

Nedry's console continues sequentially through labels that turn gray: SECURITY OFF... VEHICLE POWER OFF... FENCE OFF. But nobody's looking at Nedry's console, either. Wu enters.

WU

How's the tour? Our guests going to beat the rain?

ARNOLD

They're at their rest stop now. Yeah, they should beat the rain.

WU

Looks like a hell of a storm coming.

44. INT. GROUND FLOOR HALLWAY

Nedry stops outside the door to the fertilization lab. He holds a ticking stopwatch in his hands. He waits. The red light by the card slot goes out, and the door thunks ajar.

45. INT. FERTILIZATION LAB

Deserted; he unzips his shoulder bag and removes a can of shaving cream, unscrews the base. The interior is divided into cylindrical slots. He goes past the barriers--- all security is off--- and enters the walk-in freezer.

46. INT. FREEZER

Shelves of reagents from floor to ceiling. A small nitrogen cold box with a ceramic door. Nedry opens it; a rack of small tubes slide out in white liquid-nitrogen smoke. Embryos arranged by species, in glass and silver foil. Nedry puts two of each into the shaving can. He screws the base shut. The can frosts in his hands; he drops it back in his bag.

47. BACK IN THE HALLWAY

Nedry walks out--- the coast is clear. Voices in the distance.

48. THE GROUND FLOOR ROTUNDA

WORKMEN assemble the dinosaur skeletons. Hammond talks with them about the skeletons.

HAMMOND

No, no, it's not a problem... I just wonder if the head has to be in that position, that's all. If it couldn't be more lifelike...

Nobody sees Nedry slip past in the background.

49. INT. THE BASEMENT

Rows of Land Cruisers. Nedry goes directly to a corrugated steel rollup door in the wall. It says "Special Armaments Jeep - Park Ranger Only". Nearby is a security card slot; its light out. Nedry rolls up the door, reveals a gasoline-powered Jeep inside. He starts the engine.

50. EXT. IN THE PARK

Nedry drives fast into the night. He comes to a gate, marked ELECTRIC FENCE 10,000 VOLTS. He opens it with his bare hands, drives through.

51. INT. CONTROL ROOM

Arnold and Wu alone. Relaxing, feet up. Out the windows, fading sun over the park.

WU

So. Everybody's on a break for a while.

ARNOLD

Yeah.

WU

And we have a break from Hammond...

ARNOLD

(laughing)

Yeah... (lights cigarette)... But he's being all right, actually. I mean, you know. Not bad. He's okay. It's just... his baby, this place. He wants it perfect.

52. IN NEDRY'S CAR

He drives hard, holds up a stopwatch to check elapsed time. Tires squeal as he takes a turn fast.

53. EXT. REST STOP

Lex and Tim stand on an overlook, above the park. Tim fiddles with his goggles, Lex just looks. Hearing squealing tires, she frowns at a car with headlights moving through the darkening park, toward the ship in the farther distance.

LEX

Timmy. Look.

TIM

(fiddling)

Just a minute...

LEX

Look now, Timmy... you don't need those stupid goggles.

TIM

Yes, I do.

LEX

Boy are you dumb. Just look.

But Tim continues to adjust his goggles. She sighs.

54. EXT. THE LOADING DOCK - NIGHT

Nedry swings the perimeter fence wide. Beyond, in bright light, the ship is tied up to the loading dock. Nedry drives forward, hurries aboard. By the fence Nedry has left open, SMALL HEADS enter the frame. They squeak.

ABOARD THE SHIP, Nedry approaches the captain, FREDDY.

FREDDY

So. You made it. A second shipment, Dennis? You must want to be rich.

NEDRY

(sullen)

They owe me.

FREDDY

And you owe me, my friend.

NEDRY

Just get it to the mainland by morning.
And make sure it stays frozen.

Nedry returns to his car. The captain watches him go.
Neither sees two BABY RAPTORS scamper up lines onto the
ship. Nedry drives away.

55. EXT. REST STOP

Tim stares through his binoculars. Lex watches.

LEX

So. Do you see?

TIM

A car going away from the dock.

LEX

Who's in it?

TIM

I don't know. I can't make it out...

WHAT TIM SEES. The dock area, the car pulling away,
headlights flaring. He pans back to dock, the ship.

TIM

Hey, the ship! I can see the captain...

LEX

What's he doing?

TIM

Just walking around... He's got something
in his hands. Like a spray can.

Tim's pan continues, stops, backtracks. The aft section of
the boat is loaded with equipment, separated from the rest
of the ship by big cargo containers. Notices movement
there.

TIM

Uh-oh.

Lex stands impatient by his side.

LEX

What is it?

Tim zooms his lenses, they whirr. He doesn't answer.

LEX

What is it?

TIM

There's some animals on that ship.

Grant is coming over. With Malcolm.

LEX

(first to tell)

Timmy sees animals! On the ship! He sees animals!

GRANT

(casual)

What animals?

In his POV, as he zooms the glasses, the image enlarges, wobbles, but it looks like small dinosaurs, darting and playing among the silhouetted stern structures---

TIM

They're raptors, I think.

GRANT

(frowning)

Raptors? On the boat?

TIM

That's what they look like. Baby raptors.

MALCOLM

I thought there were no raptors free in the park.

GRANT

Can I see, Tim?

TIM

Sure.

Grant puts on the glasses, fumbles. Tries to make it work.

GRANT

How do you, uh...

TIM

(taking Grant's hand)

It's this knob here... feel it?

GRANT

Yeah. Okay...

The goggles whirr, zoom.

TIM

Look in the back of the boat...

GRANT

I'm looking... But I don't, uh... I don't know, I just don't see--- uh oh.

MALCOLM

What is it?

GRANT

Two... I can't tell... Tim, they do look like velociraptors. And the boat is casting off.

REGIS

(coming up)

Sure, that boat's going back to the mainland.

GRANT

(removing glasses)

Better get it back. You have a radio in the car?

REGIS

Sure. Why?

Heading toward the cars, Grant briskly, Regis reluctant.

GRANT

Call the control room and notify the boat. You've got dinosaurs on that boat.

REGIS

Oh, I don't think so, Dr. Grant. (reaches through window takes out radio handset) Control. This is Ed. Control. Over. (skeptical) You actually think you saw dinosaurs on the boat?

GRANT

Yeah, I do.

REGIS

Control. This is Ed. Control. (pause)

Hello?

Grant just stares. Regis shakes the headset.

REGIS

Control. (switch knob) Muldoon. Anyone.
Control. (shakes the headset) Radio's dead again.

GRANT

Again?

REGIS

We've had some problems with our communications equipment.

MALCOLM

Problems with your communications equipment, health problems with the animals, you have quite a lot of problems...

GRANT

Let's head back. Come on, everybody! Into the cars! How long will it take to get back?

REGIS

About twenty minutes... But I assure you, there's no reason to be alarmed.

GRANT

(gives him a look)

Come on, kids! We're heading back.

56. INT. FIRST LAND CRUISER

Everybody climbs aboard. The whole dashboard is dead. Regis, in front, starts snapping buttons. Nothing happens.

REGIS

(relieved)

Well, no wonder the radios don't work! We have no power. (picks up handheld intercom) Dr. Grant?

GRANT

(on intercom)

No power here. Can we call the control room with these radios? Or Muldoon?

REGIS

No, it's too far. Beyond range.

GRANT

Can we call anybody?

REGIS

Not until we get power, no.

LEX

You mean we just have to sit here?

MALCOLM

(on intercom)

How long will it take that ship to reach the mainland?

REGIS

Eighteen hours. It won't arrive until noon tomorrow. But don't worry. We'll have power back in a few minutes. Then we'll straighten out all your concerns.

57. IN THE ROTUNDA

Hammond directs workers around the Tyrannosaurus skeleton.

HAMMOND

No, no, make it more menacing! More alive! Can't we twist it around so it is menacing that herbivore?

WORKMAN

You mean move it?

HAMMOND

Exactly. So it can bend and (imitates a lunge, jaw thrust forward) threaten the plant eater, you know.

WORKMAN

You want to move the whole skeleton?

HAMMOND

(imitating)

Or just turn it around. A Tyrannosaurus Rex should be fierce! Snapping! Fierce!

58. IN THE CONTROL ROOM

Arnold and Wu look down through windows into the rotunda, where Hammond is a snapping, snarling Rex in a pinstripe suit. The workmen appear stunned.

WU

How many times you think he'll make them move it?

ARNOLD

At least ten times. This'll go on for weeks. He's a perfectionist.

Chuckling, they head back to the consoles.

WU

What happened to your monitors?

ARNOLD

What's that?

WU

Your park monitors. They're all out.

Sure enough. Computer screens still glow, but monitors showing views of the park are black. Arnold punches buttons.

ARNOLD

What the hell?...

WU

You lose power?

ARNOLD

Yeah, but only on the perimeter. I've lost all my outside power. Lights, TV, cameras, everything. I can't see a thing in the park.

WU

What about the Land Cruisers?

ARNOLD

I don't know. They must still be at the rest stop near the Tyrannosaur hill. If the power's out, they're not going anywhere. Call maintenance and find out what happened.

Wu picks up one of his phones and still hears hissing.

ARNOLD

No phones. That damn Nedry.

WU

John. Look... (pointing)... Your electric fences are off.

ARNOLD

What?

WU

All over the park, it looks like.

ARNOLD

(as it hits him)

My God. The electric fences are off!

59. ON THE MAIN ROAD

Rain drums the roof of the Land Cruisers. Water streams down the windows. Bored, Lex writes her name in condensation on the glass. Tim adjusts the night vision goggles, then looks. In shades of electronic green and black, we see the Land Cruiser behind. Then the bright-green foliage and sections of the grid pattern of the fence. Lightning flashes.

LEX

One one thousand... two one thousand...
three one thousand...

Thunder crashes, close. Tim scans the side of the road. He sees a claw grip the fence... and another... Regis sees it too. A look of panic on his face as he realizes the fences are out.

60. EXT. LAND CRUISERS

Regis flees from the side door, ducking his head in the rain. The fence bangs down against the Land Cruiser, pressed by an unseen force, then springs back up.

THE TYRANNOSAURUS chases Regis, both of them disappear down the road into the rain. Then a final scream...

IN THE CARS

Tim and Lex, alone in the car now, stare at each other. Her eyes wide as saucers. The Rex comes back.

GRANT

(on radio)

Tim, what's going on? Tim?

LEX

(wailing)

He's coming, he's coming!

Tim leans over the back seat and yanks the door closed.

GRANT

(on radio)

Get down. Stay away from the windows. And be quiet.

The Tyrannosaurus bounds forward, moves between the two cars. Lex watches with wide eyes. The Rex circles the Land Cruiser, looking inside, then snaps his head down, shatters the windshield, jarring the kids. The Rex moves to the back, sinks its fangs into the spare tire and tears it away--- lifting the rear; it thumps down, with a muddy splash.

GRANT

(on radio)

Tim! Tim, are you there?

TIM

(whispering)

We're okay... so far.

The Rex scratches himself, rocking the car, then sees them through the sunroof. He smashes it down and the plastic bubble falls over the kids like a shield, as the Rex lowers his whole head into the car; his breath snorts on the plastic; his tongue slaps wetly. He repeatedly pokes his head in--- trying to get at the bubble, to pull it away. He fails.

Frustrated, he attacks the car repeatedly, ramming it with his head. Tim and Lex bounce and roll, gasping. The car goes over. Mud oozes in the windows as the kids scramble up. The big head thrusts in and chomps... upholstery! Now the Rex gets his teeth around the side post and lifts the whole car into the air. The Rex tries to slide the kids toward his mouth. They struggle to hang on, but Lex falls through the side window. She lands near the Rex's huge clawed toes, scrambles to her feet, moves away...

Tim in the car is tilted high, loud metal rending, and then

everything outside swings crazily. The trunks of the palm trees move sideways--- as the car is released.

Grant sticks his head out the window, trying to see in the rain. He blinks his eyes, unable to believe what he sees: Tim's car, high in a tree, one wheel spinning. Grant ducks back in.

MALCOLM

(squinting)

What happened to the car? Could you see what happened to the car?

GRANT

You wouldn't believe it.

Through the rainy windshield... the Rex coming toward them, head down. In attack mode.

MALCOLM

You know, at times one can't help feeling that extinct animals should stay extinct.

GRANT

I know just what you mean

MALCOLM

It's been a pleasure, Doctor.

Malcolm bolts into the rain toward the rest station. The Tyrannosaur sees him, leaps forward. Malcolm's feet splash in the mud. The Rex closes quickly.

61. INT. REST STATION

Malcolm stumbles down the concrete ramp to the rest rooms below. He reaches for the key on a chain to unlock the men's room door. He fumbles, glances over his shoulder. The Rex ducks and charges forward, lifts Malcolm off his feet and tosses him with stunning violence, smashing open the ladies' room door, crashing Malcolm back into the stalls.

62. BACK AT THE CAR

Grant is about to run when the Tyrannosaur spins back to him, and suddenly the Tyrannosaur faces him, roaring! Grant freezes by the open door... The Rex roars again. Grant presses his trembling hands against the door. The Tyrannosaur roars, but does not attack. It moves away, then

abruptly whips its head back, very close to Grant! The black nostrils flare inches from his face. The muscular jaws open and close.

Somehow, Grant doesn't move. Because he is working it out: the Rex can't see him if he doesn't move. Then the big hind leg lifts up and crashes on the roof of the car, slides off with a metal screech, barely misses Grant, and blows the tire. Startled, the Rex delivers a mighty kick and the Land Cruiser tumbles over. Grant falls backward, down a hill along with it. He slides into mud, and lies unconscious. Above on the road, the Rex roars triumphant, and moves off.

63. INT. CONTROL ROOM

Hammond leans forward over the control panel, intense.

HAMMOND

What do you mean, you can't see what's happening in the park?

ARNOLD

Nedry turned off the monitors in the park. We can't see a thing out there.

WU

(at Nedry's monitor)

We're trying to fix it.

HAMMOND

Look, my kids are out there! There's a storm, they're stuck out there!

ARNOLD

I know, Mr. Hammond, and I'm sure Muldoon will pick them up on his way back in. But Nedry's done something to the code. We need Nedry.

HAMMOND

(his suspicions confirmed)

Nedry! When I get my hands on him...!

64. INT. NEDRY'S CAR

Nedry squints through the rainy windshield. He swerves to avoid a dinosaur. The car skids---spins through a fence---and stops. Nedry looks out to see where he is.

65. EXT. THE END OF THE ROAD FOR NEDRY

The front wheels are over a concrete embankment. Nedry climbs out, goes to the front of the car to look at how bad it is. He can see in the glare of his headlights, he's stuck. He climbs down the embankment, looks back.

He hears a hooting cry. Nedry looks up, drenched. He hears the hoot once more, and now it's closer. He starts to scramble back up the incline, looks over his shoulder to see:

A DILOPHOSAUR at the bottom of the embankment. Nedry edges slowly away. The dilo jaws puff. The hood flares out. The neck snaps forward--- and it spits! Nedry smacked on the shoulder by a dark foamy gob... a second hits the headlamp... then he gets it.

NEDRY

(disgusted)

Jeez... spit...

Scrambling away, he reaches the car door, gives a final glance at the dinosaur... and gets it right in the eyes! A scream of pain--- Nedry covers his face, twists, bangs into the door frame as he tries blindly to enter the car. The spitter stalks him. Nedry gropes his way into the Jeep, but something unseen pulls him backward... out of the car... and he moans in horror. His fingernails claw the seat. He's gone!

66. INT. CONTROL ROOM

Hammond glowers at Wu. Computer code flashes by.

HAMMOND

Well?

WU

Without Nedry, it could take hours to fix this...

HAMMOND

I don't have hours. My kids are out there.
(thinking of it) Dear God...

ARNOLD

I'm sure Muldoon will pick them up any minute now. Probably has already.

67. EXT. SOMEWHERE ON THE ROAD

Muldoon's Jeep is stopped by a fallen tree across the road. It looks much too big to move. Muldoon struggles among the leaves with Ellie and Gennaro, trying to pass a cable under the branches.

MULDOON

Ready? Heave! Ready? Heave!

GENNARO

(gasping, straining)

I have a bad back.

MULDOON

Doesn't bother me! Ready? Heave! Okay!

Ellie loops a cable under the branches, swings it back...

ELLIE

Okay, got it!

They start back to the Jeep and its winch.

GENNARO

(rubs his back)

You really think you can move this tree?

MULDOON

Sure. Another five or ten minutes now, and we'll be going down this road. Come on!

68. EXT. ELSEWHERE ON THE ROAD - NIGHT

Lex stares up as Grant climbs a tree toward Tim's Land Cruiser, perched high in the branches.

69. INT. TIM'S LAND CRUISER

Tim lies against the passenger door, his face on the glass of the window. Tim rolls over, groggy. He stares down in horror: the ground is far below. He ducks back, and with a crack, the Land Cruiser noses over, tilting. Then it stops. Grant appears beneath the passenger window. He hangs from branches below the car.

GRANT

You okay? (Tim nods) Good. We're going to get you out of here. Okay? (Tim nods)

Good. Nice and easy, now, son... Let's open this door. Easy...

Tim eases forward. The car shifts. He tries the passenger door. The handle is jammed bent. Grant signals him to try the rear door, past the seat. He moves slowly. The car lurches. Grant dangles from the front door as a counterbalance. The car stops its movement. Grant lets go, hanging from a branch... the car is balanced... but precarious! Tim lies against the glass, and moves to the rear door. It's stuck, too. Grant appears below.

GRANT

What's the matter?

TIM

I don't know, it's stuck and I can't...

Suddenly he twists the door handle; the door opens outward; spilling him down. Tim slides out... grabs, and hangs by one hand from the door handle... the door swings like a hinge.

Lex looks upward, worried.

LEX

Timmy! Be careful!

Hanging beneath the car, Tim closes his eyes, annoyed to hear this advice, however well meant. Then Grant pulls him over.

GRANT

Easy now...

The car rises as Tim's weight releases. Branches creak, but the car holds stable. Then ever so slightly moving again.

GRANT

Let's get out of here.

They climb down fast. Above them the car slowly, slowly upends. The grill noses over like a metal mouth. Now the car is pointing down. And it falls.

Grant is one branch above Tim. He lets go just as the grill smashes down on that branch. And miraculously it holds... but for how long? They scramble down. Above, the branch cracks, wood splintering. The car moves again. Grant looks up.

GRANT

Jump! Jump!

They let go and fall, banging from limb to limb, grunting at each impact. The Land Cruiser crashes down after them.

70. THE GROUND BELOW

Tim lands hard, stunned. Grant falls beside him, grabs Tim and rolls them away as the Land Cruiser smashes down. Grant staggers up, leaning against the tree, gasping.

It's been a tough night. Lex comes up and takes his hand, hugs him. Distantly, the Rex roars.

LEX

I'm scared.

GRANT

Me too, Lex.

Another roar. Closer. Crashing sounds in foliage.

71. IN THE CONTROL ROOM

Arnold works to get the systems back on. The monitors flicker, but... nothing.

HAMMOND

You still can't see in the park?

ARNOLD

Not yet, no, the systems are---

HAMMOND

---Restore the damn systems! And get my kids back, safe and sound.

ARNOLD

Muldoon should be there by---

HAMMOND

Muldoon! Muldoon! Muldoon should have been back here half an hour ago! I'm tired of hearing about Muldoon!

72. EXT. FALLEN TREE AREA

The tree, winched aside enough to allow Muldoon's Jeep to

break through to the clear road beyond. Muldoon accelerates.

MULDOON

Finally!

73. EXT. REST AREA

Muldoon looks at two trashed Land Cruisers. Ellie looks in horror. Gennaro stares at this liability nightmare.

GENNARO

What happened?

MULDOON

Looks like the Rex came over the fence. Over there. Attacked the cars.

GENNARO

The electric fence?

MULDOON

Power's out.

ELLIE

(looking in one car)

There's nobody in this one. Maybe they got away.

They hear a groan, and Muldoon turns.

74. INT. REST AREA BUILDING

Muldoon runs forward, flashlight swinging. He stops, crouches over Malcolm... ashen but groaning, alive. Flashlight down to legs, to see white bone splinters through trousers.

MULDOON

Come on, Dr. Malcolm. Let's get you back. (to Gennaro) Give me a hand. Gently.

MALCOLM

You missed... (cough)... one hell of an exciting tour.

MULDOON

Easy there... easy...

75. EXT. REST SITE

With Ellie and Gennaro, Muldoon sets Malcolm into the Jeep. In the distance, we hear the roar of the Rex.

MALCOLM

We have to... contact supply ship... the ship...

MULDOON

(to Ellie)

We better take Malcolm back. He's hurt badly.

ELLIE

Of course. Let's go.

MULDOON

(reassuring)

We'll find the others.

ELLIE

Of course. I know we will.

She looks desolate as she gets into the car. A distant roar.

ELLIE

Is that the Rex?

MULDOON

Yeah.

ELLIE

Why is he roaring like that? (sees Muldoon hesitate, as he starts the engine) You can tell me. Why?

Muldoon drives away.

MULDOON

That's the sound it makes when it's hunting.

76. EXT. THE PARK - WOODS

Grant and the kids run---with the Rex in furious pursuit. Its huge feet splash in swampy water. Our group heads for the trees, where in thick foliage, they have an advantage. The Rex just smashes down trees and branches. Our group

dives, slides down an incline. The Rex snaps and snarls to get at them...

At the bottom, they run through swamp water. Starting up an inclined tree, Grant, Lex, and Tim are already well off the ground as the Rex comes forward. They climb fast. He almost gets them as they climb, lunging upward, snapping.

The Rex circles the tree, snorting, then lunges upward, almost pushing it over. As the Rex starts to climb the tree, his weight pushes it down.

Grant and the kids jump to a neighboring tree, getting higher. But the Rex still circles below. Suddenly, the Rex stops his attack, turns away... Grant and the kids are puzzled. Until they see the Rex turn and charge a distant herd of Hadrosaurs.

Everybody leans back against the tree trunk, exhausted.

77. INT. CONTROL ROOM

Staring at the screens, the vertical map...

ARNOLD

Huh. The Rex is among the hadrosaurs.
We're going to lose animals.

HAMMOND

Animals... what about the people?

ARNOLD

Nothing yet. They don't seem to be out there.

ELLIE

They're out there.

ARNOLD

Well, they're not moving. If they were moving, I would pick 'em up.

MALCOLM

No, you wouldn't. You'd never pick them up, doing what you're doing.

Malcolm, feverish, gray, sweating. Propped up in a corner of the room. Muldoon starts an IV for morphine.

ARNOLD

(patiently)

Dr. Malcolm. You just got through telling us that two baby raptors got onto the supply boat...

MALCOLM

That's right...

ARNOLD

But we've checked our raptors. And they're all accounted for. We have all the raptors we grew. So there can't be any raptors on the supply boat---

MALCOLM

---Of course there can. For the same reason you can't find Grant and the kids.

ARNOLD

(lost)

What?

HAMMOND

What are you saying we should do?

MALCOLM

How many dinosaurs are you tracking now?

ARNOLD

Two hundred thirty-eight. The total number out there.

MALCOLM

So when the computer gets to 238, it stops counting?

ARNOLD

Yes, of course... that's all there are.

MALCOLM

But now you're looking for Grant and two kids. So you should be looking for a total of 241.

WU

(gets it)

I'll be damned! He's right!

MALCOLM

Of course I'm right, I'm always right. And while you're at it, search for 300 animals.

WU

Three hundred?

ARNOLD

(shakes head, hits keys)
Searching for... three hundred.

The screen prints: Total Animals: 241. Talk is fast:

HAMMOND

So! My kids are out there!

ARNOLD

(relieved)
Yeah. Looks like it, sir.

ELLIE

(soft)
Thank God.

HAMMOND

(to Muldoon)
Go out and get them.

MULDOON

I'll go right now... (looks at map, with flashing dots) Wait a minute. That's not possible... (pointing) They're ten miles from the Land Cruisers.

The screen suddenly prints: Total Animals: 258.

HAMMOND

(sitting forward)
What the hell is that?

ARNOLD

We're picking up more dinosaurs.

HAMMOND

From where?

Total Animals: 269. The vertical map fills with spots.

HAMMOND

What's going on?

MALCOLM

The computer is counting the dinosaurs in the park. All the dinosaurs.

HAMMOND

I thought that's what it always did. You're telling me there are more we don't know about?

Total Animals: 281.

ARNOLD

Apparently.

HAMMOND

How? The dinosaurs can't breed. (to Wu)
Can they?

WU

No. They're all female. They can't breed.

HAMMOND

Then where are they coming from?

The screen prints the complete tally: Total Animals: 292.

ARNOLD

According to this, we have 292 animals in the park.

WU

But that's impossible...

MALCOLM

It's not impossible, it's inevitable. Chaos theory says... (wincing in pain)... you can never control certain phenomena at all. You may be able to engineer prehistoric animals and set them on an island. But you can't control them. No matter how you try, you just can't.

Staring at the board of winking lights, Hammond looks particularly distressed at this speech.

GENNARO

(to Arnold)

Is he right, that this island is uncontrollable?

ARNOLD

No, he is absolutely wrong.

MALCOLM

(loudly pointing to map)

You can't even find the kids, let alone protect them.

ARNOLD

(to Hammond)

Can we get him out of here?

MALCOLM

You're all sitting here, in the middle of a disaster! Call the ship and get it back here.

ARNOLD

We can't. The phones are still out. We have no communications at all with the outside.

GENNARO

When are we going to get it? We've got to have communications.

ARNOLD

Look. I can shut the computer down, clear memory, and get the phones back right now. But I don't want to shut down until we can locate the Rex and immobilize him. We've got those people out there.

GENNARO

How long do you have to shut down? To clear memory?

ARNOLD

Maybe 30 seconds.

GENNARO

Thirty seconds? What's the big deal? Shut it down now!

An awkward silence. Nobody will look him in the eye.

ARNOLD

We've never done it before.

GENNARO

What do you mean?

ARNOLD

We've never shut the computer down. I assume it'd come back if we shut it down, but... the computer controls everything...

GENNARO

(realizing)

You're afraid to shut it down.

ARNOLD

(getting annoyed)

You want to take responsibility for shutting it down, Mr. Gennaro?

Arnold flips up a panel of five covered buttons.

ARNOLD

There you go. Thirty seconds off, and then just turn 'em back on. What do you say, Mr. Gennaro?

Gennaro hesitates, looks. Hesitates. Wipes his lip.

GENNARO

Maybe it's prudent to wait.

ARNOLD

Maybe it is.

MALCOLM

You can't hold this thing together. You can't even get your phones to work!

MULDOON

I think Dr. Malcolm should rest now. Mr. Gennaro, you want to help me move him back to the lodge?... Easy, Dr. Malcolm... It'll be fine...

MALCOLM

It obviously will not be fine...

Malcolm exits. Hammond immediately turns, grim:

HAMMOND

(to Arnold)

I want my kids back here, safe and sound.

ARNOLD

And they will be. We can go pick them up, now that the computer has completed its scan... (turns confidently)... and it has identified the non-dinosaur anomalies, which are Grant and your kids... (beat, staring at the screen) Huh. They're not showing up.

78. BACK TO THE TREE

High in the branches, Grant sits. He glances up at Tim, a few branches above. Tim waves, sits back. Lex is soon snoring softly. Grant raises his arm to look at his watch, but it is too dark to see.

79. EXT. THE TREE - LATER - NIGHT

Tim awakens. He looks up, and sees the long graceful necks of six sauropods, moving silhouetted against the full moon. He sits forward, then leans back to sleep again.

80. EXT. THE TREE - DAWN

Grant opens his eyes. He's close to the huge beige head of a gentle, cow-like duckbill. Chewing the limb where Grant sits. Its lips touch Grant's ankle. Grant's astonished to see it so close. Unafraid. He watches it eat, and is nudged from behind by the snout of another duckbill, and turns to see.

A whole herd feeds around the tree. Babies scamper around the feet of the adults. Sometimes adults bend low and let babies stand on hind legs and eat branches that protrude from the side of the mother's mouth.

What's attracted them? On a branch above, Tim feeds the animals with leaves.

TIM

(softly)

Pretty neat, huh? (hands Grant a branch)
They like the blossoms best.

GRANT

Where's Lex?

TIM

Over there.

81. ON THE GROUND

Lex feeds a baby Triceratops grass, and then jumps up on it, giggling, and the baby tosses its head happily and starts to trot, running away with her.

GRANT

Oh boy.

As Grant starts down, the Hadrosaurs trumpet in alarm, and the animals pull back. Grant goes down fast. Tim comes down after him. The herd honks, annoyed. The baby Triceratops swings around. Grant arrives just as it passes him.

GRANT

(jogging after her)

Lex...

LEX

(gaily)

Hi, Dr. Grant!

GRANT

(jogging)

Listen, Lex... stop...

Grant pulls her off the baby. Lex yelps in protest. The baby continues, crests the hill--- and is reunited with a very large mother. Lex falls silent. Stops struggling.

GRANT

Come on, Lex, we've got a long trip home.
Now if Tim... (looks around) Where is Tim?
Where has he gone?

LEX

Honestly, that boy. Just look at him.

Grant follows her gaze: Tim crouches among bushes.

82. EXT. AMONG BUSHES - DAWN

Tim stands by something we recognize from the excavations in Montana: a round cone of dried mud, with a dozen broken eggshells at the top. Grant crouches.

TIM

What do you think?

GRANT

It's a nest... no question...

LEX

I thought they couldn't breed.

GRANT

Yeah, well. They can.

LEX

Boy, this island is really a mess.

TIM

(pointing)

One of the babies died, there are the bones...

The small bones to one side jogs Grant's memory. He pulls the folded fax from his pocket and lays it alongside the bones. They look familiar in size and configuration.

TIM

What's that?

GRANT

Something from the mainland. We have to get back. Right away. Come on, kids. It's a long walk.

LEX

I don't want to walk. Why can't we take the boat?

GRANT

What boat?

83. EXT. THE LAGOON SERVICE ROAD - DAWN

A BABY RAPTOR jumps off a sign marked "To boat." Beyond, a road runs down to the lagoon, to a dock and a shed.

GRANT

We can get all the way to headquarters by boat. Good work, Lex.

Lex beams. Grant leads them down the road. They hear a curious rhythmic snorting sound.

Rounding a bend, they see the Tyrannosaur, leaning up against a tree, staring at them. Grant pulls the kids behind a wide tree.

Grant looks cautiously around. The Rex's eyes are open, but the big head doesn't move. Is it dead? The Rex swipes at the flies with its forelimb. It's sleeping.

Grant crosses the road, in full view of the sleeping Rex, then motions the kids to follow him. They come close to the Rex, when he snorts, and scratches the back of his ear like a dog. The Rex shifts his tail... revealing the dock just ahead. As they start forward the tail lifts lazily in the air, and slaps down between Grant and Lex, isolating her. Grant reaches in and plucks her out! They stumble back, landing near the jaws of a dead hadrosaur!

Lex gasps, and Grant claps his hand over her mouth. They run for the shed.

84. EXT. THE SHED AND DOCK - EARLY MORNING

Grant unlatches the door, hands orange vests to the kids.

GRANT

Wait here for my signal.

He carries the raft as a rubber cube to the end of the dock. It expands, snaps open with a hiss-whap! The Rex snorts, almost awakens, but settles back. Grant beckons the kids. They come out in their life preservers, and move tensely toward Grant. They climb into the raft, and he pushes off.

85. EXT. LAGOON SWAMP

The raft moves among tree stumps, dark fetid water. Tim breathes a sigh of relief. Exploding with tension:

LEX

Nya na na naa nah!

GRANT

(horrified)

Lex--- what are you doing?

LEX

Stupid dinosaur! Nya na na naa nah!

TIM

Lex, shut up!

Ashore, the Rex awakens, sees the raft pulling away.

LEX

So what? Dinosaurs can't swim.

The Tyrannosaur gets to its feet. Moves laterally into woods.

TIM

Of course they can. All reptiles can swim!

LEX

No they can't.

TIM

They can.

LEX

Can't!

This argument is silenced by an ominous off-screen splash. Moments later, a surging wave rocks the raft. They look anxiously for the Rex. The Rex glides like a croc through the swamp, and submerges.

They're still looking when the nearby water boils, and the Rex rises up, jaws gaping. The surge of water pushes the raft away. Trying to get them, the Rex thrashes against nearby trees. One dead tree topples over, just missing the kids, but pinning the raft. Grant and the kids struggle, and free it as the Rex lunges forward.

Barred from following, the Rex is frustrated to see the raft get away. The raft floats away.

86. EXT. ELSEWHERE IN THE PARK - DAY

A binocular view pans the park, and the river. Then it stops. Muldoon lowers the binoculars and walks back to the Jeep.

MULDOON

Good. Finally.

GENNARO

What is it? Do you see the kids?

MULDOON

No. But I see Nedry.

87. THE EMBANKEMENT - DAY

The Jeep still over the lip. Green shapes scatter as they arrive. PROCOMPSOGNATHIDS, no larger than a duck, stand back chittering as Muldoon and Gennaro approach.

MULDOON

Compys. Scavengers. They like to eat you while you're still alive... But where is our man Nedry?

They start looking, Muldoon in the Jeep, Gennaro to the side bushes. Gennaro sees legs sticking out of the bushes.

GENNARO

I found him...

MULDOON

(simultaneous, from
Jeep)

I found Nedry...

They look at each other, realizing...

MULDOON

Let's get out of here.

He's taking out armaments from the Jeep.

GENNARO

What about the embryos?

MULDOON

Not here. But we need these weapons. Come on, finally we can give the Rex a dose.

The car departs.

88. INT. EXTRACTION LAB

Ellie bent over a microscope, examining the material taken from the stegosaurus. Automated laboratory equipment clicks and blinks around her. She clicks on the UV light, scans the visual field, many cells now glowing.

ELLIE

Huh.

WU

(entering)

Finding anything interesting about our stego?

ELLIE

There's a lot of ruptured cells here, particularly epithelials. And the organelles are all lit up.

WU

You think it might be something they're eating?

ELLIE

No. I'm running tests (gesture to equipment) and we should know in a few hours, but it looks like defective endoplasmic reticulum. It looks genetic.

WU

(cool)

Really.

ELLIE

You been having any problem with protein metabolism in these animals?

WU

(a beat)

Not that I'm aware. We can ask Muldoon. But don't you think you should take a break? You've been at this all night.

ELLIE

I'd rather be busy. Have they found them yet?

WU

No, not yet. But you ought to take a break.

ELLIE

I'll work a little while longer. Let me know if they find them.

89. EXT. ON THE RIVER

The raft drifts downstream, between narrow banks.

TIM

But how can the dinosaurs breed if they're all female? Or did they make a mistake?

GRANT

I'm not sure. But some animals can change their sex under environmental stimuli...

He stares at the shoreline bushes, which shake and move. Tim stares, too, then:

TIM

You mean change from female to male?

GRANT

Yes. Some frogs can do it, for example, and maybe dinosaurs can do it, too.

More rustling. Snorting.

LEX

It's him.

We see the shadow of the Tyrannosaur against the heavy growth. It moves downstream, ahead of the boat, and tries again, butting the branches furiously.

90. EXT. ALONG THE RIVER

The Tyrannosaur directly ahead, moving among the palm trees by the river. The Jeep bounces along. Muldoon driving.

MULDOON

Break out those canisters. We'll give him a full dose to start.

Gennaro opens a Halliburton case. Slim shells each the size of a table candle. Tipped with needles.

MULDOON

Don't prick your finger, that stuff's so concentrated you'll sleep a week.

Muldoon drives slowly closer to the Tyrannosaur, which pokes its head through the branches, trying to get through.

GENNARO

He's following the river... Wonder what he sees in there?

MULDOON

Hard to know... (halts, leaves motor running)... Take the wheel.

He loads one canister. Gennaro slides behind the wheel.

MULDOON

I'll hit him just behind the auditory meatus. We'll see how it goes from there.
(beat, appraising) You all right? (Gennaro nods tensely) Put your seat belt on.

Muldoon walks ten yards ahead. Steadies the gun against his shoulder. A burst of pale gas. A white streak toward the Tyrannosaur. The dart sticks in its neck.

The Tyrannosaur turns slowly to them, and bellows in fury.

The sound brings Gennaro right to his feet in panic. Muldoon runs away from the Rex. But Gennaro has already put the car in gear and is backing up; Muldoon chases the fleeing car. Just as he gets there, it fishtails 180 degrees, knocks him on his back. The Rex charges right over him, the feet landing on either side of him, and continues toward the Jeep.

As Muldoon gets up, Gennaro backs up abruptly. Muldoon rolls, hugs the ground. The Jeep drives over him. When the vehicle clears, Muldoon looks up to see the Rex bearing down on him, mouth low, ready to scoop him up.

Muldoon rolls again, missing the jaws. Gennaro is coming now, he swings the side door wide and slams into Muldoon, picking him up like a sack of mail, and the Rex head snaps around to get him, but misses at the last moment!

The Jeep speeds away, and Muldoon gets into the car. The Rex roars behind them.

MULDOON

I guess one dose didn't do it. Damn, he's strong.

The Jeep heads north, toward the lodge.

91. BACK ON THE RIVER - VARIOUS SHOTS

Narrow, and flowing swiftly. Grant squints. Ahead the trees widen, and there's a distant steady roar. The river seems to be changing character... Grant grabs for his paddles.

TIM

What is it?

GRANT

White water!

The raft races forward toward boiling white water.

LEX

I can't swim!

92. EXT. THE RAPIDS

A twisting stretch of white water. At the far end, the Rex awaits them. Standing in the river, astride the rocks, water shooting up his massive legs.

Grant sees what's coming, and tries to stop the raft---grabbing at tree branches, trying to paddle---but the boat moves too fast. It spins, and keeps going. The Rex waits, solid amid roaring water--- like a bear fishing for salmon.

Grant and the kids realize it's inevitable. They are being swept right to the Rex. The raft spins and the Rex opens its jaws and lowers its body to the level of the riverbed, as if it is going to scoop them up, but at the last moment it just flops over on its side.

The raft collides with the big head. Snags on the fangs, air sizzles out---it's sinking. They scramble up the Rex's shoulder, and across its wheezing body...

93. BACK IN CONTROL ROOM

ARNOLD

Okay. The Rex is down. Finally!

He grins as he lights a final cigarette, crumples the pack.

MULDOON

I knew I got him. (to Gennaro) It just took him an hour to feel it. But if it hadn't worked, I'd have used these.

Muldoon loads the gun with stubby gray shells.

GENNARO

What's that?

MULDOON

Randler implosives. Usually does the job.

HAMMOND

Look! Look!

Cheers and general jubilation as they see Grant and the kids on the monitor. Climbing over the body.

94. EXT. THE RAPIDS

The dinosaur's chest still moves; a forearm twitches. Tim sees the canister sticking in the neck.

TIM

He's been shot with a dart.

LEX

Good. He practically ate us.

Tim watches the labored breathing, distressed to see the huge animal humbled.

TIM

It's not his fault.

LEX

Oh sure. He practically ate us and it's not his fault.

TIM

He's a carnivore. He was just doing what he does.

Grant can't help but inspect it, he looks at the back of the head feeling bones, touches the cheek muscles. The Tyrannosaur feebly raises his forearm to push Grant away. Grant grabs the arm, holds its clawed hand briefly in his, and then notices the nails. They're cracked. He sets the arm gently back down on the animal.

GRANT

Come on, let's go. It's not far to headquarters now. We're almost home.

95. BACK TO CONTROL ROOM

ELLIE

Thank God... They're all right.

MULDOON

I'll go out and pick them up.

HAMMOND

Right away! Right away!

GENNARO

Good, now how about the telephones?

ARNOLD

We'll shut down the computer, clear the memory, and get our phones back. Henry?

WU

(snapping open covers)

Let's do it. Shutting down now.

ARNOLD

Okay. Here we go.

Everything in the room goes out: all the lights, the screens.

WU

(peers at watch)

Waiting thirty seconds...

They stand in the dark, tense. Arnold lights a cigarette.

WU

All right. Memory should be clear. Let's switch on...

They snap the switches back on, one after another. No result.

GENNARO

Nothing happened.

ARNOLD

Guess not.

GENNARO

What's the matter?

ARNOLD

I don't know. Let's check the book.

GENNARO

Check the book?

Wu gets out a series of fat loose leaf manuals. They open them one after another. Gennaro stares in disbelief.

GENNARO

What are you, kidding?

WU

(discarding first book)

This is setup. You have OS commands?

ARNOLD

(discarding book)

No, submodules only.

GENNARO

You're looking up an instruction book?

ARNOLD

That's right, Mr. Gennaro.

WU

Here we are. OS startup procedures...
Section C-9... 'Powerdown can be reset
from main power switch only.'

ARNOLD

Oh. Okay. Makes sense.

Arnold gets up.

GENNARO

Where are you going?

ARNOLD

To the maintenance room. We have to reset
power from the main power switch at the
generator.

HAMMOND

Muldoon, get the kids.

MULDOON

Yes, sir. Right away.

96. INT. BY THE RAPTOR PEN

Arnold and Muldoon heading toward the maintenance building.

MULDOON

You know where this power switch is?

ARNOLD

Yeah, no problem. Just get back with the kids, or Hammond will be hell.

As they pass, a raptor attacks---hits the fence with a metallic clang, falls back. The fence rattles afterward.

ARNOLD

They never give up, do they.

Muldoon frowns. He looks long the rattling fence.

MULDOON

No shocks that time...

ARNOLD

Think he noticed?

Muldoon squints, but they have their answer. A crescendo of whoops and shrieks builds the pit, and suddenly the raptors are jumping up at the fence on all sides.

MULDOON

Oh hell.

One raptor leaps up right at them, and Muldoon fires twice at point blank range, killing it. He reloads.

MULDOON

Get going.

Arnold backs away in horror to the other side of the fence and is moving off when a raptor leaps up, grabs him, and drags him backwards over the side. Muldoon leans over and fires down into the pit. Then he sees several jumping up on the gangway. They move toward Muldoon. He fumbles to reload.

97. EXT. IN THE PARK

Grant and the kids walk toward headquarters, which they see high on the cliffs ahead. They hear muffled gunshots, and distant cries. They look at each other.

GRANT

Come on, kids.

LEX

(worried)

What is it, Dr. Grant?

GRANT

I don't know, Lex. But I think---

With a scream like a cougar, a SPITTER rears up right in front of them. It drops down again. They turn to run back the way they came, and ANOTHER SPITTER rears up, with another scream. It flares its hood, menacing. They're trapped.

Grant starts laterally into the jungle, pulling the kids. On either side, cat-screams and thrashing in the underbrush. We go faster and faster, until directly ahead, a THIRD SPITTER screams up into view. We dive into ferns to the side.

GRANT

What is this, a convention?

On all sides, screams and hoots. Our group, beneath giant five-foot ferns, listens. Grant slowly peeks out.

Above the ferns, he sees two spitters. They are different: one large and brightly colored, one small and dark. They hoot agreeably, and bob. A third spitter, also large and bright appears at the edge of the fern-frond. Immediately, the first spitter screams and flares at the intruder. The intruder matches. The first spitter screams intimidatingly. The intruder drops its hood, backs away.

The first spitter returns its attentions to the small dark one. Gentle hoots. Gently replying hoots... Grant ducks back down.

LEX

Are they fighting?

GRANT

Not exactly.

LEX

It sounds like fighting.

Grant looks again, and Tim sneaks a peek, too. Tim comes down with wide eyes.

GRANT

I think they might be preoccupied now.
Come on.

The group starts crawling, beneath the fern cover. Snarls

continue. They come up to a tree root that blocks their path. They tentatively go over it.

Up above, they slip past the spitters, which are entwining their long necks, doing a complex dance (like mating cobras). Our people slip past.

LEX

Well if it's not fighting what are they doing? Are they making babies?

GRANT

(relieved)

That's right.

LEX

I thought so.

98. EXT. THE JUNGLE - VARIOUS SHOTS

They hurry on. Intermittent explosions and cries.

99. EXT. THE FENCE

Marked 10,000 VOLTS, it's the fence Nedry opened. Grant pushes it open, and goes toward headquarters. It is ominously quiet. They move slowly.

100. EXT. THE VISITOR CENTER

Grant and the kids pause at the entrance to the visitor center. The doors gape ominously wide. They slowly enter.

101. INT. ROTUNDA

Gray mist blows. A sign, WHEN DINOSAURS RULED THE EARTH hangs at an angle. General disarray. Grant takes a dead guard's radio and tries it. Softly:

GRANT

Hello, this is Grant. Is anybody there?

Hello, this is Grant.

Lex stares at the legs of the dead guard, partially revealed behind the security desk. Radio crackle:

WU

(on radio)

My God. Grant? Is that you?

ELLIE

Alan? Alan?

GRANT

It's me. I have the kids. We're okay.

ELLIE

Thank God. Alan, where are you?

GRANT

In the visitor center.

ELLIE

They're here. (beat) Alan, listen. The raptors have gotten free. They may be in the building with you.

GRANT

The raptors?

ELLIE

Muldoon killed three. But there are six left.

GRANT

And where are you?

ELLIE

We're all in the lodge... We've lost some people. We can't find Hammond. He may be dead.

GRANT

Are the telephones working? Because we need to call---

ELLIE

Malcolm already told us. The computer is off. Power is off. Nothing works.

GRANT

Can we get it back on?

ELLIE

Alan, we have a real problem here.
(crackle) Two of the raptors followed us here. They're on the roof. The bars are

supposed to be electrified, but the power's off. They're biting through the bars now...

GRANT

Biting through the bars?

ELLIE

Alan, just a minute. (crackle)

102. IN THE LODGE

In the skylight above Malcolm's bed, TWO RAPTORS have chewed through one of the steel bars. One raptor grips the end of the bar and tugs, putting his powerful hind limb on the skylight. The glass shatters, glittering down on Malcolm's bed below. Gennaro, head bandaged, removes fragments from the sheets. The raptors snort. Foamy saliva spatters onto the bedside table.

MULDOON

(limping on sprained ankle)

They can't get in until they chew the other bar. Five minutes at most...

WU

If Grant could just get to the maintenance shed...

MULDOON

(staring up)

He can't get there quickly enough. Not to stop this.

MALCOLM

(coughing)

Yes. Can... if... distraction...

MULDOON

Distraction?

MALCOLM

At... fence... outside...

WU

Wait a minute. He's right. We have two raptors here. There's four more out there somewhere. If we could draw them here,

Grant could go to maintenance and turn on the power. It might work!

MULDOON

Draw them here? Who's going to be the bait?

WU

Your ankle's shot. I'll do it.

ELLIE

You're the only one who knows how to turn on the computer. You need to tell Grant what to [do. I'll do it.]

MULDOON

No, I don't think so.

ELLIE

Why? Think I can't do it? (bends over, laces her running shoes) Just don't tell Alan. It'll make him nervous.

She heads for the door with Muldoon, as Wu takes the radio.

WU

Alan, are you there? This is Wu speaking.

103. BACK TO THE LOBBY

The lobby is silent, chilly fog drifting past them.

GRANT

I'm here.

WU

Listen. We need you to turn on the power, in the maintenance building.

GRANT

Okay.

WU

We think we can draw all the raptors down here to the lodge. Give us two minutes. Then it'll be clear for you to go to maintenance.

GRANT

Okay.

WU

Leave the kids in the cafeteria. Take the radio with you when you go. Call me when you get to the maintenance building. I'll tell you what to do.

GRANT

Okay.

Grant turns the radio off.

GRANT

Come on, kids.

104. INT. CAFETERIA

Dining-room tables and chairs, and beyond a pair of swinging stainless-steel doors, with little round windows in them.

GRANT

Stay here. I'll only be gone about five minutes. Okay?

Grant gives them a cheerful smile, turns away.

LEX

(smiling bravely)

Don't worry about us, Dr. Grant. We'll be fine.

As the door closes, the cafeteria becomes dark. Lex clutches his hand. He leads her forward.

LEX

Timmy, you think we can find some food?

TIM

Like what?

LEX

I don't know, maybe ice cream.

They go deeper into the dining room.

105. EXT. THE FRONT OF THE LODGE

Ellie steps out into the chilly mist. Directly ahead, the bars of the fence, already pale in the fog. Beyond, the landscape turns milky white. The gardens are eerily silent.

At the limit of her vision, almost lost in the fog, a ghostly-pale shape: a raptor.

MULDOON

They're out there.

ELLIE

(opening the gate)

Maybe they'll know this sound.

The metal hinges creak loudly. She closes it again, opens it. More creaking. She leaves it open. Two raptors appear, but don't approach closer. Ellie steps through the gate, going outside the bars.

MULDOON

I wouldn't do that...

ELLIE

We've got to get all four down here. Maybe they'll know this sound...

106. EXT. BEYOND THE FENCE

She scuffles her feet loudly on the gravel. Behind her, the fence disappears fast in the fog behind her. She's twenty yards from the fence now, the mist like light rain. She moves through a world of shades of gray. Muscles in her face taut. Her eyes straining. Looking for anything... a leaf moving... anything...

The raptors attack in utter silence. The first one charges from the foliage at the left, and Ellie whirls.

107. BACK AT THE LODGE FENCE

Hearing running feet, Muldoon opens the gate. Ellie emerges from the fog, running flat out. Muldoon slams it shut as she races through, and she hits the building and turns in time to see three raptors smash snarling against the fence.

MULDOON

Good work!

He taunts them, snarling back, driving them wild. They fling themselves at the fence, leaping, and one of them nearly makes it over the top. Ellie gets to her feet, blood running down her leg.

ELLIE

Three animals here--- and two on the roof.
That means one is still missing! There's
one more raptor!

The raptors at the fence snarl viciously.

108. EXT. NEAR MAINTENANCE BUILDING

Grant moves quickly into the mist, hearing distant snarls.
A raptor can attack at any moment in this fog. Up ahead,
the rectangular maintenance building emerges.

109. EXT/INT MAINTENANCE BUILDING

Grant steps inside a door. He listens, hears nothing. He
raises his radio and speaks quietly.

GRANT

This is Grant. I'm inside.

WU

(on radio)

All right. Good. If you look straight
ahead, you'll see a metal walkway with
railings. Go along the walkway.

Grant walks out the walkway, like a metal gangplank over
darkness.

GRANT

I'm going.

WU

(on radio)

Be careful... we can't account for one
raptor. It may be in the building with
you.

GRANT

Great.

110. INT. THE KITCHEN

Tim opens big walk-in refrigerators, one after another. He
finds all kinds of food, cartons of milk, stacks of
vegetables, T-bone steaks, fish...

LEX (O.S.)

Timmy...

He tugs open the next refrigerator, opens it to see a walk-in freezer: a whole room, freezing cold.

TIM

(annoyed)

Will you wait a minute? I'm trying to find your ice cream.

LEX

(whispering)

Timmy... something's here.

Tim hurries out of the freezer. Lex points to the door. We hear a low hiss, like a snake. Tim creeps to the kitchen door.

In the dining room, A RAPTOR moves among the tables. It's alert, head moving with abrupt, bird-like jerks. From time to time, the raptor looks below the tables. A sniffing sound. Then the head snaps up again. It's coming toward them...

Tim turns back, pushes Lex into a cupboard.

TIM

(whispers)

Stay here!

LEX

(panicked whisper)

Why, what are you going to---

TIM

Never mind!

He shuts the cupboard, runs for the refrigerator. He grabs a handful of steaks and hurries back. He places the first steak on the floor, moves back, places the second... He sees Lex peeking around the cupboard door, waves her back. He places a third and fourth steak, moving deeper into the kitchen.

The hissing is loud. A clawed hand grips the door. The big head peers cautiously around.

Tim stops. He's had no time to conceal himself. Very slowly, Tim sinks beneath the stainless worktable... The

raptor jerks its head around, looks directly at Tim. Tim freezes.

The raptor stands motionless in the doorway. It seems like forever. The animal silently yawns, throwing back its head, exposing rows of razor-sharp teeth. The nostrils flare.

The raptor steps forward---directly toward Lex! It must smell her! The raptor pulls open the cupboard door, and plunges its head in---with a great banging of pots and pans! It pulls out. Pans clatter at its feet.

More banging inside the cupboard. Lex is crawling, getting away.

Outside, the raptor follows her sounds. It pulls open a second door, snarls and jerks forward... its whole body shaking as it bites... Lex screaming... Tim horrified. The raptor comes out with something in its teeth, tugging and jerking at it. Tim can hardly bear to look.

But it's the baseball mitt! The raptor sniffs it, then tears it between its claws, noses it away, chases it, like a game... and finds the first steak.

Tim doesn't move. He stands frozen in a half-crouch.

The raptor eats the steak, T-bone and all. Raises its head, sees the second steak, moves quickly forward. Bends down. Silence: the raptor doesn't eat it. The raptor moves quickly to the third steak, dips its head, and moves on---coming closer to Tim, who holds his breath. The dinosaur is just a few feet away. We see scary details: small twitches in the flank muscles. Crusted blood on the claws.

The raptor turns, seems to look right at Tim. The eye scans the room. It sniffs, then turns away. The raptor ignores the last steak, and moves to the open freezer. Smoke curls along the floor toward the raptor's feet. Feeling the chill, one big foot lifts, then comes down again. Curious, the raptor enters! The head, the body disappears, and finally the stiff tail.

Tim sprints, slamming the locker door shut, but he catches the tip of the tail! The door won't close! The raptor roars, a terrifying loud sound. Inadvertently, Tim steps back, and the tail slips inside. Tim shoves the door and it clicks! Closed!

TIM

(screaming)

Lex! Lex!

The raptor pounds the door, thumping steel. Tim leans his body against the door handle, holding it shut. Lex comes up.

TIM

Get the pin! The little pin!

The raptor roars, the sound muffled by the steel. It crashes against the door. The pin dangles, swinging on a chain.

LEX

I can't see it!

TIM

Feel for it!

Her hand reaches up, groping, her breath in panicky gasps as the raptor slams against the door and the door opens!--- but in the moment of recoil Tim slams it shut again.

LEX

I have it!

She pushes the pin through the hole. The dinosaur slams again. The steel wall hinges creak, but hold. The raptor is locked in.

Tim takes her hand, and they exit.

111. INT. MAINTENANCE ROOM

The cover snaps open on the big main power switch. Grant flips it. There is a hum. The generator starts. But no lights.

GRANT

The generator's on. But why haven't the lights come back on?

WU

Because, we turned the computer off manually. Now the computer has to be turned back on manually.

GRANT

I don't know anything about computers.

WU

Go back to the control room, and I'll talk you through it.

GRANT

I have to go back to the control room?

WU

Yes. And turn on the computer.

GRANT

Don't you think this is a little complicated?

WU

Please hurry, Dr. Grant.

112. AT THE LODGE

The raptors have nearly chewed through the second skylight bar. They can now poke their heads through the shattered glass. Wu runs to the front door. Muldoon is inside by the window, panting. We now see the extent of his leg injury; he has a raptor bite. Outside, Ellie still taunts the dinosaurs.

WU

Grant got the generator on! He's on his way back now! (throws open door) Grant got the generator on!

ELLIE

(entering)

Great! Fantastic!

WU

We'll have the computers back on in a minute or two! We're going to make it!

MULDOON

Shut that bloody door!

Too late. A raptor jumps down from the roof and Wu is yanked bodily out the door. Muldoon looks out and sees Wu is lying on his back, feebly reaching up to push the big head away as it eats him. Muldoon slams the door. Ellie looks horrified. Hearing whooping, they go to the windows.

They see that the three raptors outside the fence are now running away. Back to the main complex.

ELLIE

Uh-oh.

113. EXT. MAINTENANCE BUILDING

Grant peers in the fog. He hears the snarls of the raptors. Moments later, they run past him toward the visitor center.

114. EXT. THE VISITOR CENTER

The raptors cluster by an industrial vent. They listen to mewling sound coming through the vent, then move off.

115. INT. ROTUNDA

Tim and Lex exit the cafeteria. As the raptors come in, Tim and Lex move toward the partially assembled skeletons. They hide behind the translucent plastic sheeting.

They see two raptors enter the kitchen. Whispering:

LEX

Timmy, what should we do?

TIM

Sssh.

LEX

I'm scared! I don't want to stay here.

TIM

Of course you're scared! I am too!

LEX

I don't want to stay here.

Across the room, the third raptor waits in shadows. It hears whispers, turns toward them.

Through the plastic, they see the shadow of the raptor. It tears the plastic. Lex screams. They push at the scaffolding. Pipes clang and roll across the floor. The raptor backs away, then turns as it hears a voice.

HAMMOND (O.S.)

If I could have your attention, please.

I'm John Hammond, and I'd like to share a few ideas with you about Jurassic Park. What it all means. So if you would bear with me for a moment...

The two raptors come out from the kitchen, hearing this.

116. INT. AUDITORIUM

Empty. Hammond projected onscreen. The raptors silently enter.

ONSCREEN HAMMOND

Oh, I know you're eager to see all the marvels that Jurassic Park has in store for you. So I will be brief. You should realize, first of all, that what you are about to see is entirely authentic. Nothing has been made up; these are real dinosaurs, ladies and---

IN THE PROJECTION BOOTH

Hammond, badly injured, surrounded by electronic equipment. The side of his head bloody. Lex's screams have roused him to start the show as a distraction. Cautiously, Hammond looks out---

The door slams open. The raptors come into the booth, snarling.

ONSCREEN HAMMOND

---gentlemen. Through the wonders of modern genetic science, you experience them just as they were, a hundred million years ago, when these magnificent creatures ruled the planet, long before the arrival of mere, puny man.

IN THE AUDITORIUM

Tim and Lex look in, hear Hammond's screams.

ONSCREEN HAMMOND

And what creatures they are! Some might say they are the very perfection of God's creation, but certainly there has been nothing since to compare to them---

(screen blurs)

ONSCREEN ED

---called DNA. Do you know, one DNA molecule in one little cell is actually six feet long! But it contains all the information to make a complete--- (screen blurs) Welcome to Jurassic Park! We hope you will enjoy your stay here...

Tim and Lex run back to the rotunda and collide... with Grant!

117. INT. ROTUNDA

GRANT

Come on.

TIM

Where are we going?

GRANT

To turn the computer on.

118. INT. MAIN CONTROL ROOM

Entirely dark except for the consoles, which show the identical screen: rows of complex labels. Grant moves forward, staring at the computer screens. Forbidding complexity.

GRANT

Jeez... (on radio)... This is Grant. We're in the control room. Tell us how to turn the computer on. (silence follows) Hello?

MULDOON

Ah, we have a problem Dr. Grant. Nobody, ah, who is here knows how to do that. How to turn the computer on.

GRANT

(incredulous)

What about Arnold and Wu?

MULDOON

They, ah, didn't make it.

Grant takes in this news grimly.

MULDOON

I think it's supposed to be... so you can work it out.

GRANT

I can't work it out.

Tim has been inspecting the console. He presses keyboard, nothing happens. He touches the screen: it blinks and changes.

TIM

Maybe I can try.

GRANT

We're going to try... (approaches consoles, looks over Tim's shoulder) You know about computers, Tim?

TIM

Yes. I know something.

Lex is shaking her head in silent concern. But Grant knows it's their only chance.

GRANT

Let's do it, Tim.

TIM

Okay.

Tim touches; the screen changes. He gets menus, and submenus. Tim gets some effects: minimal room lights come on; the colored map glows; one monitor shows the raptors on the visitor lodge roof. Another shows inside the room: Malcolm in the bed, Ellie and others standing by. Looking up.

MULDOON

(on screen using radio)

We haven't got a lot of time. Get that power grid on Dr. Grant, if you can.

They hear the raptors snarl, see one of the long heads duck through the glass, enter the picture from the top.

GRANT

Can you find the power grid, Tim?

TIM

I'm trying.

Tim is going fast, his fingers flicking on overlapping windows, more layers of submenus. Incredibly complex. He's shaking his head, frustrated.

GRANT

What's the matter?

TIM

It won't let me turn it on.

GRANT

Why not?

TIM

I don't know. It's giving me error messages.

Onscreen, repeated messages flick up: POWER GRID F4 (VISITOR LODGE) CANNOT BE TURNED ON. (POWER INCOMPATIBLE WITH COMMAND ERROR.)

GRANT

Keep trying.

LEX

(at window)

Look.

Grant sees three raptors coming up the rotunda staircase.

GRANT

There are six raptors left, and two are at the lodge...

LEX

And we locked one in the freezer.

GRANT

Did you!... That means those three are the only ones left.

LEX

They're coming up here...

GRANT

I'll take care of them. (exiting) Keep at it, Tim.

Tim barely nods: he's focused entirely on the screens.

119. IN THE LODGE

The raptors have chewed through the second skylight bar. They can now poke their heads entirely through, and lunge and snarl at the people below. Then they pull back, and resume chewing metal.

MALCOLM

(grimly)

It won't be long now. (on radio) How's it coming there, folks?

120. INT. RONTUNDA - TOP OF STAIRS

Grant sees the raptors at the top of the stairs.

MALCOLM

(on Grant's radio)

How's it coming there, folks?

Grant swears under his breath. But the raptors have already heard it, and start coming toward him fast! Grant looks around. No way out except...

THE TYRANNOSAURUS SKELETON

Grant climbs over the balcony, onto the unfinished skeleton. He clammers noisily down, hanging from the Rex jaw, swinging from rib to rib. He is most of the way down when the raptors see him. Two run back down the stairs. The third leaps onto the skeleton, and it topples over under the added weight.

Grant uses the collapse as a diversion. He runs off. The third raptor emerges from the skeleton. It's unharmed. All three pursue Grant.

121. INT. EXTRACTION LABORATORY

The room where Ellie's experiment is in progress. Rows of stereo microscopes in green light, the high-res screens showing giant black-and-white images of insects and cells. Grant runs through the laboratory. The raptors pursue him, past screens that still blink endless sequences of computer-deciphered DNA code. We hear radio over:

TIM (ON RADIO, O.S.)

What are you going to do?

GRANT (ON RADIO, O.S.)

I spent my whole life studying these animals. I've always had a theory they ate eggs. I'm going to feed 'em.

TIM

Will that work?

122. INT. THE HATCHERY LABORATORY

Beneath red infrared lights, the eggs rock in steady motion. Mist drifts over the tables to the floor.

GRANT

(low)

I sure hope so.

Grant hides in the glass-walled laboratory at the rear. His clothes glow in the ultraviolet light.

In the main room, the raptors silently pass between the tables of eggs. They spread out, move in a coordinated way, ducking to peer beneath the tables. They don't eat the eggs.

Grant crouches, peering around a glass-and-metal hood, then notices the hood itself is marked with a skull and crossbones. CAUTION POISON and BIOGENIC TOXINS. He sees bottles of poisons.

Grant looks from the raptors to the poisons. A plan! But the hood is flush against the table. Grant can't slip his hand under it. He sees no handle, no way to open it. Then he sees a covered metal fixture sunk into the surface of the table. He flips up the cover, sees a button, presses it. With a soft hiss, the hood slides upward, to the ceiling.

Bottles of poison glow pale green. A dish with syringes, each containing green fluid. Grant takes a fistful of syringes. He pulls a plastic needle cap off one with his teeth.

Reaching up into the mist, Grant takes a football-sized egg from the rocking table. He injects. The egg glows faint blue. Grant rolls the glowing egg along the floor, toward the raptors' legs. The raptors hear it. They jerk their heads around, listening.

The egg stops short of the dinosaurs. They ignore it.

Another injection, another roll. This egg comes to rest, clicking gently against the toe claw of one raptor, looks down in surprise, then ignores it. Moves on.

Grant rolls a third egg fast, like a bowling ball. The egg rattles across the floor. One animal hears the sound--- ducks down, sees it coming---and instinctively chases the moving object, gliding among the tables to intercept the egg as it rolls. The raptor bites into it, crushing the shell.

The raptor stands, pale albumen dripping from its jaws. Licks its lips noisily, and snorts with pleasure. It bites again, and laps the egg from the floor. But it doesn't seem to be in the least distressed.

It bends over to eat again from the broken egg on the floor. Grant looks down to see what will happen... From across the room, the raptor sees him. The big head freezes, and snarls.

It moves toward Grant, crossing the room in long, incredibly swift strides, when suddenly it makes a gasping, gurgling sound and pitches forward onto the ground. Foam bubbles from its mouth. Choking sounds. The head flops back and forth. The tail slams and thumps in spasms.

The other raptors in the room are frozen in mid-action. They listen to the dying animal. One moves to the fallen raptor, bends over it, puzzled. Cautiously, it looks at the foaming head, and twitching neck, the heaving ribs.

An egg rolls towards the second raptor's feet. It bites it. Glowing material drips down its chin. Stricken instantly, it pitches forward, knocking over a table. Dozens of eggs roll across the floor. Grant looks in dismay: eggs everywhere.

Grant has one final syringe. The last raptor snorts---it has spotted him. This raptor does not move for a long time, it just stares. And then slowly, quietly comes forward. Stalking him. Bobbing up and down, it moves deliberately, cautiously, with none of the swiftness that it displayed in a pack.

The raptor never takes its eyes off Grant. Grant's gaze is fixed on the raptor, as he moves slowly laterally. Grant tries to keep as many tables as he can between himself and

the advancing animal.

As Grant maneuvers, he feels the radio bulge in his pocket. He takes it out, sets it aside, and then takes it back, turns it on.

GRANT

(softly)

Hello. This is Grant.

ELLIE

(on radio)

Alan? Alan?

GRANT

(softly)

Listen. Just talk.

He pushes the radio across the floor, toward the advancing raptor. The raptor continues toward Grant.

ELLIE

(on radio)

Alan, is that you?

The tinny voice makes the raptor pause. It sniffs the air, as if sensing someone else in the room.

ELLIE

(on radio)

Alan... can you hear me?

The raptor turns away from Grant, toward the radio, as if it were another person. The animal is very close.

ELLIE

(on radio)

Alan, listen to me... Alan?

The raptor pokes at the radio on the floor. The big tail swings above Grant's head. He reaches up and jabs the syringe deep into the tail, injects the poison.

The raptor shrieks in fury, whips its tail---and smacks Grant in the head. He reels under the tables. With frightening speed, the raptor spins back toward Grant, wide jaws snapping---they close on the table leg nearest Grant--the head jerks up, and the table is flung away. Grant is on his back, completely exposed. The raptor roars, raises its head so it bangs into infrared lights above, making

them swing crazily.

ELLIE

(on radio)

Alan?

The raptor lifts its clawed foot. Grant rolls. The foot smashes the radio, spattering sparks. The raptor snarls in fury. Grant comes to rest against the stainless steel wall, nowhere else to go, and the raptor leaps forward, raising its feet in attack. And it topples backward. Wheezing. Foam comes from its mouth.

123. IN THE CONTROL ROOM

The whole screen is flashing yellow as Grant enters.

GRANT

What happened?

TIM

I don't understand, I have to set the power grid and it is doing this thing.

GRANT

(shaking head)

I don't know anything about computers.

Tim touches the screen rapidly. On one video monitor, we see the boat moving closer to a dock on the mainland. But on the other main monitor, the raptors look down from the lodge ceiling. We hear their snarls.

LEX

Do something, Timmy!

TIM

I'm trying...

He pushes INFO, gets a copyright notice. He pushes FIND. More stuff. Pushes GO BACK. He's getting nowhere at all. Frantic, sweating, he pushes buttons.

MULDOON

(on radio)

How's it coming? We need that grid.

Tim pushes ELECTRICAL MAIN, gets a complicated screen.

GRANT

What are you doing now?

The whole screen is starting to flash red. Tim pushes MAIN GRID. The computer answers: MAIN POWER GRID NOT ACTIVE/AUXILARY POWER ONLY.

GRANT

Main power's not active? But I already turned it on.

TIM

I guess I have to do it here, too. Who knows...

The screen is still flashing. He pushes buttons. The computer answers: MAIN POWER ACTIVATED.

The room lights come on. The monitor screens stop flashing.

LEX

All right!

On the video monitors the raptors are almost through. He hears the sound of the bars bending in the lodge, and the raptors snarling. Tim gets the grid for the lodge, he pushes the right numbers. The computer responds: ACTIVATING LODGE GRID H4 NOW.

TIM

That should do it.

But nothing happens.

TIM

(throwing hands up)

That should do it! I give up!

And it does: the video monitor flares white in an explosion of sparks, sputtering down from the ceiling of the hotel room.

124. INT. THE LODGE

The raptors explode in a shower of sparks, and Ellie rushes to get Malcolm out of the hot cascade of sparks. The raptors shriek and die.

125. BACK IN THE CONTROL ROOM

Jubilation, shouting. Jumping up and down.

GRANT

(slaps Tim on back)

That's it. That's it! You did it!

Lex, a little jealous of the attention to Tim, breaks the mood.

LEX

(pointing at screen)

What about the ship?

GRANT

The what?

On the monitor, the ship is close, preparing to dock. Crewmen heading out to the bow, preparing to tie up. Tim scrambles back to his seat, and studies the screen. He presses buttons.

TIM

This one is easy.

Names and numbers spill over the screen, an enormous directory. A dial tone, then the tone of the numbers being automatically dialed in rapid succession.

On the screen, the prow of the ship closes on the Puntarenas dock. The ship is only two hundred yards offshore. A high-pitched squeal, then:

FREDDY

Ah, hello, John, this is Freddy. Are you calling me? Over.

Tim picks up a phone.

GRANT

(reaching)

Let me. Hello, Anne B? This is Alan Grant. You are in possession of stolen biological materials. If you don't return to this island immediately, you'll violate Section 509 of the Uniform Maritime Code, subject to revocation of license, penalties of one hundred thousand dollars, and ten years in jail. Do you copy that, Captain?

A pause.

FREDDY

I copy. (beat) All ahead stern.

The boat turns away from the dock. Lex begins to cheer. Tim collapses back in the chair, wiping sweat from his forehead.

TIM

What's the Uniform Maritime Code?

GRANT

Who the hells knows?

On the screen, the boat is definitely heading away from the shore. Grant slumps in a chair. Tim slumps back. Lex sighs.

LEX

Whew!

126. INT. EXTRACTION LAB

CLOSE on complex cellular imagery. Grant and Ellie at microscopes, as Gennaro enters.

ELLIE

There it is.

GRANT

(shaking head)

No question about it.

GENNARO

Helicopter is on the way to pick up Malcolm. And us... What is it?

ELLIE

We've discovered something about the animals.

GRANT

The claws are cracked on all these dinosaurs. And Ellie picked up high protein levels last night.

GENNARO

Meaning what?

ELLIE

Wu isn't here to ask, but I think he accelerated all the genetic developmental

sequences, to make the animals grow faster. And the DNA is unstable.

GENNARO

Unstable?

GRANT

All these animals are going to die.

GENNARO

When?

GRANT

I think they knew. That's why they were hatching so many more eggs.

GENNARO

So it was never exactly what they said it was. (checks watch) We have to go...

127. EXT. HELICOPTER PAD

A final view looking down on Jurassic Park, this one clear, with the dinosaurs in the afternoon sun.

MULDOON

It could have been something.

And it really is fantastic, the adults and the babies, the carnivores... an [word omitted] landscape...

ELLIE

They'll all die again in the next few weeks.

MULDOON

Extinct twice...

GRANT

It's just as well. They may be the greatest animals in history, but they don't belong here now.

The helicopter thunders down for a landing. Grant and the others climb toward the open door.

128. ON THE HELICOPTER

Everybody in harnesses. Tim and Lex smile at Grant and he suddenly sees how young they are, and how exhausted. The

helicopter lifts away from the pad. Grant looks out the window.

MALCOLM

'The greatest animals in history.' Maybe someday, human beings will earn the right to be called that...

129. THE DINOSAURS

They look up as the helicopter flies over the island. The helicopter is lost in the setting sun. The mechanical sound dies. Now we have a moment of primordial jungle sounds, nature as it once was, undisturbed. Just the dinosaurs. Then slowly:

FADE OUT
